WELCOME
Hager Companies provides single-source solutions for the door hardware industry with a line of quality products that includes:

• Architectural Hinges
• Residential Hinges
• Roton Continuous Geared Hinges
• Stainless Steel Continuous Hinges
• Trim & Auxiliary
• Thresholds & Weatherstripping
• Sliding Door Hardware
• Locks
• Door Closers
• Exit Devices

Since 1849, Hager’s focus has been innovative products, exceptional value, and incomparable customer service. Additionally, Hager offers complimentary comprehensive consulting services. Our services include design development assistance, budget preparation, door hardware specification writing, code compliance, submitted schedules review and approval, and technical project support.

We believe that by offering these value-added services, along with our premium quality, value-priced products, you’ll see for yourself how Hager gives you “more for your door than any other brand.”

So whatever you’re looking for—from simple everyday needs to solutions for unconventional applications—you’ll find it in our 2016 Catalog.

GENERAL INFORMATION

TERMINOLOGY
Terminology used in this catalog complies with the following ANSI/BHMA standards:

- ANSI A156.1 - Butts and Hinges
- ANSI A156.2 - Bored and Pressembled Locks and Latches
- ANSI A156.3 - Exit Devices
- ANSI A156.4 - Door Controls-Closers
- ANSI A156.5 - Auxiliary Locks and Associated Products
- ANSI A156.6 - Architectural Door Trim
- ANSI A156.7 - Template Hinge Dimensions
- ANSI A156.8 - Door Controls-Overhead Stops and Holders
- ANSI A156.12 - Interconnected Locks
- ANSI A156.13 - Mortise Locks and Latches
- ANSI A156.14 - Sliding and Folding Door Hardware
- ANSI A156.15 - Release Devices-Closer Holder, Electromagnetic and Electromechanical
- ANSI A156.16 - Auxiliary Hardware
- ANSI A156.17 - Self Closing Hinges and Pivots
- ANSI A156.18 - Materials and Finishes
- ANSI A156.21 - Thresholds
- ANSI A156.22 - Door Gasketing Systems
- ANSI A156.25 - Electrified Locking Devices
- ANSI A156.26 - Continuous Hinges
- ANSI A156.28 - Keying Systems

ANSI NUMBERING SYSTEM
Letter “A” denotes section “A” of ANSI Standard

First Numerical
The first numeral indicates general type of material used.
1 - Cast, Forged or Extruded Brass or Bronze
2 - Wrought Brass or Bronze
5 - Stainless Steel, 300 Series
8 - Wrought Steel, Forged Steel or Malleable Iron

Second Numerical
The second numeral identifies type of product.
1 - Full Mortise Hinges
2 - Half Mortise Hinges
3 - Full Surface Hinges
4 - Half Surface Hinges
5 - Anchor, Pivot Reinforced or Thrust Pivot Unit and Hinge Sets
6 - Olive Knuckle Hinges
7 - Pivot Hinges
8 - Rescue Hardware

Third Numerical
The third numeral identifies the function or the description of the item or both.
1 - Anti-Friction Bearing
2 - Anti-Friction Bearing - Swing Clear
3 - Plain Bearing
4 - Thru 0 - Special Conditions

Fourth Numerical
The fourth numeral designates the grade classification of the item.
1 - Grade 1 - 4BB Extra Heavy Weight - 2,500,000 Cycles
2 - Grade 2 - 2BB Standard Weight - 1,500,000 Cycles
3 - Grade 3 - Plain Bearing – 350,000 Cycles

Information taken from: ANSI A156.1 (Butts and Hinges)

CODES AND ILLUSTRATIONS

Units of Measure
- EACH - Item in a box either with or without screws.
- PACK - Items poly bagged (1 or more) per bag.
- PAIR - Items (1 or more) pair per box.
- SET - Items (1 or more) sets per box.

Illustrations
Pictures and illustrations shown in this catalog are for general product information only and are not meant to be used as templates. Contact Hager Companies Sales and Service for templates or installation instructions, or go to www.hagerco.com to download.

Packaging
The following codes have been established to provide clarification of packaging methods. The basic code letter(s) are shown in parenthesis in the unit column of each page. The letter designation refers to the standard Hager Pack.

Hager Companies reserves the right to change the packaging methods when deemed necessary and to increase or decrease quantities to make full case quantities on a specific item.

- B = Boxed
- PB = Poly Bag
- BLK = Bulk Pack
- SET = Set

APPROVAL
Hager Companies has been approved by the U.S. Corps of Engineers and by the Veterans Administration for use on all veterans hospitals and on other buildings that would come under their jurisdiction. Approved samples are on file at the National Bureau of Standards, Washington, D.C.

Note: Frequency chart recommendations apply to all average weight doors. Heavy ball bearing hinges should be used for doors having a thickness of 2" (51 mm) or more over a width of 3’ 4” (1016 mm). Any doors on which a closing device is used should be equipped with bearing hinges, regardless of frequency of use.
TRADE ORGANIZATIONS

The American Hardware Manufacturers Association
The purpose of AHMA is to promote the sale of American made products through the hardware distribution system. Hager Companies is a member in good standing of the American Hardware Manufacturers Association, the owner of the AHMA registered trademark.

Door and Hardware Institute
The purpose of the Institute is to represent the architectural openings industry as a major component of the construction industry. Hager recommends the service of a qualified A.H.C. for the preparation of hardware specification and schedules. Members of this society are qualified through years of experience and rigid examination to handle the most complex hardware situations.

Builders Hardware Manufacturers Association
The Builders Hardware Manufacturers Association is a national trade group of manufacturers whose products are classified (Standard Industrial Classification #34294) and most familiarly recognized as locks and builders hardware. Where applicable this catalog shows BHMA numbers in conjunction with Hager numbers. The purpose is to advance the interests of the Builders Hardware Industry in all lawful ways.

Association of Millwork Distributors
The Association of Millwork Distributors has continued to be recognized as the leader in the millwork wholesale distribution industry for almost half a century. The Southern Sash and Door and Northern Sash and Door organizations, joined forces 42 years ago to become the National Sash and Door Jobbers Association (NSDJA). On the 40th Anniversary of NSDJA, the association changed its name to the Association of Millwork Distributors (AMD). This change signified that the leadership and membership of the association recognized the changes in the millwork industry.

AMD represents the millwork industry with over 1,000 distributor, manufacturer, and manufacturer’s representative companies, nationally and internationally, that promote the best in products and services that the millwork industry has to offer.

AMD is a chief advocate, actively engaged in issues regarding standards, trends, and resources in the millwork distribution industry. AMD monitors Congressional activity and various regulatory agencies, continually seeking to promote industry benefits for AMD members.

AMD is committed to being an essential resource for its members, providing educational products, networking events, and pertinent industry information to help members stay updated on millwork industry trends and available opportunities.
**Florida Building Codes**

The following products have been approved for statewide acceptance by the Florida Building Commission pursuant to Rule 9B-72.090, F.A.C., for approval of products and systems for use on Exterior Swinging Door Assemblies, in compliance with the structural requirements of the 2007 Florida Building Code.

Verification of Florida Statewide acceptance can be found at www.floridabuilding.org under the Product Approval section.

* Load in parenthesis indicates the equivalent load in pounds per square foot based on indicated door size and door stiffness (if applicable). This load is based on the hardware item taking half of the force applied to the door assembly by the wind load and the hinges taking the other half.

** This load indicates the design load for a single butt hinge. Maximum wind load should be calculated based on door size, number of hinges used, and the other available door hardware on the door assembly.
Basic Requirements for an Opening to be Classified as Fire-rated

The wall, frame, and door all have to be fire-rated. For example, as it would not make much sense to put a labeled door in a non-rated wall just as you cannot put a non-labeled door in a rated wall and call the opening fire-rated. The purpose of a fire-rated opening is to retard fire for a specific length of time. All components of the opening have to be rated. When an opening is also required to be “S” (smoke) labeled then additional gasketing items will be required to comply with the code.

Every swinging fire door must have a listed and labeled self-latching device to engage the strike to be fire-rated. Push and pull plates cannot be used on a fire-rated door. The door has to latch into the frame when closed so it stays closed. The latch prevents the door from opening during a fire if something falls against it. This means you must use at least a passage lock set on the door. Deadbolts cannot be used in place of a latching device because they are not self-latching.

The door must be self-closing to be fire-rated. A properly sized, listed and labeled closing device is part of basic fire door hardware requirements. If the door is left open during a fire, then that opening cannot retard the fire as it was meant to do; the door needs to close after somebody passes through it. This is usually done by a door closer or, in some cases, spring hinges.

Steel ball bearings and steel based hinges must be used on fire-rated doors. Brass, bronze and other base materials cannot be used, unless tested as an assembly. Continuous hinges are allowed as tested. Plain bearing hinges cannot be used. Bearing hinges minimize wear from everyday operation and help prevent door sag. During a fire, the door needs to operate smoothly so closers and latching devices work properly. Some manufacturers may provide doors with non-bearing type hinges only when they are part of the listed assembly.

Fire-rated and listed louvers can be installed on fire doors but they have to be a fusible link type. This means that once the heat from the fire reaches a certain temperature (usually 105°F (41° C), the fusible link will melt which causes the louver blades to close. This will help prevent the spread of fire. The maximum size for these louvers is 24” x 24” (610 x 610 mm). There is no glass allowed in a fire-rated door if it has a louver and no louvers can be installed in a 3-hour rated door.

Basic fire door frames do not have hourly ratings. The exception being frames specially labeled for less than 3 hours. Frames bearing a recognized fire label may support a 3-hour, 1-1/2-hour, 3/4-hour or a 1/3-hour door. Frames used in masonry walls can be used with a maximum 3-hour fire door. While frames in drywall are intended for use with fire doors rated up to 1-1/2-hour, some manufacturers have tested for a 3-hour frame in drywall. Verify with your manufacturer for individual listing. **Remember, these are basic requirements. Codes differ from area to area and are enforced by the Authority Having Jurisdiction (AHJ)**

The purpose of a fire-rated opening is to retard fire for a specific period of time.

The hourly designation indicates the duration for the fire test exposure and is known as the fire protection rating.

**A Label:** 3-hour rating (for a 4-hour wall): These doors are used for openings in walls separating buildings that are joined together. They are metal doors and glass is allowed as tested. “A” label doors might not require additional seals applied to the frame, check with your individual manufacturer’s procedure. Typically, a hollow metal door needs no added seals. Metal and some composite doors expand when heated. The door itself effectively seals the opening and often does not require the addition of an edge sealing system for the fire label. However, this door would still need a smoke gasket if it were functioning as a smoke control door.

**B Label:** 1-1/2-hour rating (for a 2-hour wall): These doors are usually used for stairwell doors but are sometimes used at all the rated walls in a building (i.e., mechanical or electrical rooms). One-hundred square inches of exposed glass per door leaf is allowed. These are mostly wood composite and hollow metal doors. A “B” label 1-hour rating (1-hour wall) exists for use in buildings less than four stories tall; this rating currently only applies to wood doors. “B” label fire doors require the addition of an edge-sealing system (category “G” gasket) to the frame to comply with the new positive pressure test method. Some wood doors do not require the additional category “G” gasket; check with your manufacturer for availability.
**C Label**: 3/4-hour rating (for a 1-hour wall): These doors are used for openings from a corridor into another room in the same building. 1,296 square inches of exposed glass is allowed per vision light. These are mostly wood composite doors. "C" label fire doors require the addition of an edge-sealing system (category "G" gasket) to the frame to comply with the new positive pressure test method. Some wood doors do not require the additional category "G" gasket, check with your manufacturer for availability.

**D Label**: 1-1/2-hour rating (for a 2-hour wall): These are hollow metal doors used in exterior walls subject to severe fire exposure from outside the building. One-hundred square inches of exposed glass per door leaf is allowed. Check with your manufacturer's listing for the addition of a category “G” gasket to meet positive pressure requirements.

**E Label**: 3/4-hour rating (for a 1-hour wall): These are hollow metal doors used in exterior walls subject to moderate to light fire exposure from the outside of the building. 1,296 square inches of exposed glass is allowed per vision light. Check with your manufacturers listing for the addition of a category “G” gasket to meet positive pressure requirements.

**1/3-Hour Door**: 20-minute rating (for a 1-hour wall): These doors do not have a letter designation for their rating and can be a wood or particle core door. 1,296 square inches of exposed glass is allowed per vision light. They are tested with or without hose stream. Doors tested without hose stream are specially labeled: “Twenty Minute-Rating Without Hose Stream.” These doors are used on condo/apartment entrances, offices of a 1-hour rated corridor wall and other applications where smoke and draft control is the primary concern.

**S Label**: The letter “S” is the designation on a door's fire label indicating it can be used as a Smoke Control Door. Door manufacturers are allowed to put an “S” on a fire label when the door opening has passed the air infiltration test. The door opening does not become approved for a Smoke and Draft Control unit until an approved category “H” gasket system has been installed on the frame. The federal government, many owners and some states require at least some openings to be labeled for smoke as well as fire. This is not limited to 20-minutes but includes all fire labeled doors that are rated 20-minutes and above. The addition of an approved category “H” smoke control gasket completes the installation instructions necessary to validate the labeled door to become a Smoke Control Door.

All of the labels listed above have the capability of being both fire and smoke barrier openings. Openings requiring smoke labels are detailed either by the fire authority having jurisdiction, local code, NFPA 101 or NFPA 5000.
In the mid 1800s, Charles Hager had a successful business forging metal wheel rims and hinges for wagons headed west. As a smart businessman who valued quality and innovation, Charles soon became a pioneer in product development, designing a revolutionary hinge that became a prototype for more than 5,000 hinges to follow.

Today, the Hager name is synonymous with commercial hinges. In fact, we are the industry's premiere designer and manufacturer of commercial hinges, with a product line that offers one of the widest varieties of sizes, shapes, and finishes--all of which meet or exceed ANSI standards. With legendary quality, time-tested durability, and consistent superior performance, Hager is the one name, and one brand, you can count on to provide it all.

**Determine Type of Hinge**

- What is the door material (wood, stainless steel, fiberglass, or hollow metal)?
- What is the frame material (wood, stainless steel, channel iron, or hollow metal)?

Hinges are manufactured in accordance with ANSI/BHMA A156.1. Self-closing hinges and pivots are in accordance with ANSI/BHMA A156.17 using three hinges per opening on a 3'0" x 7'0" x 1-3/4" (914 mm x 2134 mm x 44 mm) door.

Round corners are available in 1/4" (6 mm) (standard) or 5/8" (16 mm) radius.

**Full Mortise**
- Both leaves are mortised, one leaf in the door and one leaf in the frame (wood door or hollow metal door with wood or hollow metal frame).
  - Example: BB1279 4-1/2" x 4-1/2" (114 mm x 114 mm), US26D

**Half Mortise**
- One leaf is mortised in the door and the other is surface applied to the frame (hollow metal door with channel iron frame).
  - Example: BB1109 4-1/2" (114 mm), US26D

**Full Surface**
- Both leaves are applied to the surface, one to the door and the other to the frame (metal clad door or hollow metal door with channel iron frame).
  - Example: BB2171 5" (127 mm), USP

**Half Surface**
- One leaf is mortised in the frame and the other is surface applied to the face of the door (wood door with wood frame or hollow metal door with hollow metal frame).
  - Example: BB1173 5" (152 mm), US26D

**Select the Proper Weight and Bearing Structure**

Because of the variety of door sizes and weights, hinges are placed into three groups:

- **Heavy Weight - Ball Bearing**
  - Example: BB1199 5" x 5" (127 mm x 127 mm), US32D

- **Standard Weight - Ball Bearing**
  - Example: BB1279 4-1/2" x 4-1/2" (114 mm x 114 mm), US26D

- **Standard Weight - Plain Bearing**
  - Example: 1279 4" x 4" (102 mm x 102 mm), US10

**Hinge Type Minimum Cycle Requirements**

- Plain Bearing = 350,000
- Standard Weight Ball Bearing = 1,500,000
- Heavy Weight Ball Bearing = 2,500,000

There are three factors that determine the weight and structure of the hinge: weight and width of the door and frequency of use. It is advisable to include the approximate weight of additional hardware that will be installed on the door.

**Determine the Size of Hinge**

The first thing to find is the height of the hinge. Follow the examples below. These are only examples. Job situations will offer many more variables.

Only on the full mortise hinges are there two dimensions, such as a 4-1/2" x 4-1/2" (114 x 114 mm). The first dimension indicates the height and the second dimension indicates the width when the hinge is in the open position.

</tr>
</tbody>
</table>

**Height of Hinge**

Height of hinge to be determined by the following:

1. 1-3/8" (35 mm) Door Responsibility - to 32" (813 mm)
2. 1-3/8" (35 mm) Door Responsibility - 32" to 36" (813 to 914 mm)
3. 1-3/4" (45 mm) Door Responsibility - to 36" (914 mm)
4. 1-3/4" (45 mm) Door Responsibility - 36" to 48" (914 to 1219 mm)
5. 1-3/4" (45 mm) Door Responsibility - Over 48" (1212 mm)
6. 2", 2-1/4", 2-1/2" Door (51, 57 & 64 mm) Responsibility - to 42" (1067 mm)
7. 2", 2-1/4", 2-1/2" Door (51, 57 & 64 mm) Responsibility - Over 42" (1067 mm)

**Width of Hinge**

There are three dimensions to know in order to determine the minimum width of the hinge: door thickness, hinge backset, and clearance required.

1. When figuring the calculations for a wood door and wood frame, the door is flush with the casing or face of the frame. When figuring the calculations for a wood or metal door with a hollow metal frame, the door is inset approximately 1/8" (3.2 mm).
2. For doors up to 2-1/4" (57 mm) thick, the hinge backset is 1/4" (6.4 mm) from the back face of the door.
3. For doors over 2-1/4" (57 mm) thick, the hinge backset is 3/8" (9.5 mm) from the back face of the door.

Once these dimensions are known, the formula can then be applied. **Take the door thickness, subtract the backset, multiply by two, and add the clearance required.** If the hinge size is not standard, then go to the next larger hinge width. If the width of the hinge is greater than the height of the hinge (example: 4-1/2" x 6" (114 mm x 152 mm)) this is referred to as a wide throw hinge. This would apply only to full mortise hinges.
Doors up to 60" (1524 mm) in height shall be provided with two hinges and an additional hinge for each additional 30" (762 mm). Where spring hinges are used, at least two shall be provided.

### Determine Type of Material

**Steel**

This has great strength, but it is a corrosive material. If the atmosphere that steel is used in is not stable, steel will begin to rust. The best application for steel is in a controlled environment, such as inside a building where the temperature and humidity are controlled.

**Stainless Steel**

This also has great strength. It is rust resistant and can be polished to a satin or bright finish. For highly corrosive areas, 316 grade or clear coat over 304L may be recommended. Hager Companies standard grade stainless steel is 304L.

**Brass**

This material is non-corrosive, rust resistant, and very decorative. However, it has less strength than the steel or stainless steel material. Brass is often used where appearance is of great concern as it may be polished and plated in various finishes.

Both steel and stainless steel hinges may be used on listed fire rated or labeled door openings. Brass material may not be used on fire rated or labeled openings because of the low melting point.

### Determine the Number of Hinges

**Determine the Number of Hinges**

The next determination is the number of hinges per door leaf. A general rule of thumb: one hinge for every 30" (762 mm) of door height or fraction thereof.

**Door Height**

- **Up to 60" (1524 mm)**: 2 Hinges
- **Over 60" (1524 mm) and not over 90" (2286 mm)**: 3 Hinges
- **Over 90" (2286 mm) and not over 120" (3048 mm)**: 4 Hinges

For doors with a width greater than 37" (940 mm) to 48" (122 mm), an extra hinge could be used for additional strength. The extra hinge helps support the additional weight and tension applied to the frame created by the wider door width.
Determine Type of Finish
All steel and brass material hinges can be plated to match the available finishes that are listed in the American National Standards Institute, standard ANSI/BHMA A156.18 Materials and Finishes.

Special Resisting Finishes
A nickel undercoat is a standard process that is applied to all steel basted PLATED hinges. The nickel undercoat is an optional process for steel based PAINTED hinges and must be ordered as an option if desired.

Note: Hager Companies only warrants US10B finish over brass base material. If steel base is necessary, Hager Companies recommends US10A lacquer finish.

Antimicrobial Protection
Hager Companies uses a powder coat process to apply antimicrobial treated coating to guarantee durability and protection. Antimicrobial resistance on products is affected by moisture in the air. Silver ions interact with humidity and are released creating a cleaner surface.

Bearing Options
When using steel based hinges, special options are available such as stainless steel pins, stainless steel bearings and stainless steel raceways.

Ball Bearing (BB) - Ball bearings are engineered to throw the knuckle weight against specially hardened steel raceways, which ride on the bearing surfaces. The one-piece cup protects the bearings from moisture and dust. The cup supports no weight so it is not subjected to functional friction, pressure or wear. Lateral wear is minimized because the pin is held against thrust by the hardened steel top and bottom raceways. The bearing units are securely press-fit to the leaf knuckle to prevent loss when the hinge is disassembled.

Oilite Bearings (OB) - The oilite bearing is made of porous metal that has been press-formed and impregnated with oil. The slight pressure and heat generated when the door is operated causes the oil to come to the surface of the bearing causing the surface to be slick and smooth.

Anti-Friction Nylon Bearings (AB/CB) - These are made of resilient engineering plastics that provide a self-lubricant and very strong bearing surface. The nylon acts as a cushion for the door yet it allows the door to flow smoothly on the surface of the nylon with an extremely low wear factor. (AB is standard on 3-knuckle hinges. CB is an option for 5-knuckle hinges).

Care and Maintenance
• Hinges must be free swinging without any binding. The use of shims to align hinges, if required, is satisfactory. Steel shims to be used on labeled openings.
• Hinges should be well greased and checked on a regular basis for lubrication. We recommend that hinges used in commercial, high-frequency applications or those in extreme environmental conditions be lubricated annually to ensure quiet operation and long life.
• Standard hinges are best lubricated by removing the pin, applying a generous coating of lithium grease, and reinserting the pin by driving it completely down to the shoulder of the pin head.
• Hospital Tip (HT) hinges that have fixed hinge pins have an oil port on the knuckle for the purpose of lubrication.
• Water displacing sprays such as WD-40 are not recommended for hinge lubrication.
• To remove dirt, simply wipe with a soft damp cloth. Abrasive cleaners or lacquer thinner should not be used to clean the surface of hinges. To do so will void any warranty for the product.

Determine Handing
On some applications it will be necessary to order hinges that are handed. Most manufacturers use the suffix RH (right hand) and LH (left hand). Another general rule of thumb, most manufacturers make the half surface, half mortise and full surface hinges for right hand use. Conversion from right hand to left hand is very simple; take the pin out of the knuckle, remove the bottom plug, turn the hinge over, replace the plug in the bottom and the pin in the top of the knuckle, and the handing is reversed.

• The hand of a hinge is determined from the key of the door to which it is applied. This is usually the locked side.
• When standing keyside, if the door opens away (into the area) to the right, it takes a right hand hinge (also referred to as RH). If it opens to the left, it takes a left hand hinge (also referred to as LH).
• When standing keyside, if the door opens (out of the area) toward the right, it takes a left hand hinge (also referred to as right hand reverse bevel - RHRB). If it opens to the left, it takes a right hand hinge (also referred to as a left hand reverse bevel - LHRB).

Additional Considerations
Determine Pin and Tip Style
• The standard in the industry is the Flat Button Tip for 5-knuckle hinges.
• The flush/concealed tip is standard on 3-knuckle. If button tip is required, specify Exposed Tip (ET).
• Hospital Tips (HT) are used primarily for security areas in hospitals and in prisons. This tip prevents hanging any objects on the tip of the hinge. Hager provides all hospital tipped hinges with two non-removable cross pins, stainless steel hinge pin, and an oil port for lubrication purposes. If the hinge is ball bearing, the components used for the bearing are made of stainless steel. Using a Hospital Tip on spring hinges voids the UL listing.
• Decorative tips such as Acorn, Ball, Steeple, and Urn are used in highly decorative areas of offices and residences.
Swaging
Swaging is a slight offset of the hinge leaf at the barrel. This offset permits the leaves to come closer together when the door is in the closed position. If the hinge were to be left in the natural state after the knuckle was rolled, the hinge would be referred to as a “flatback”. A flatback hinge has a gap between the leaves of approximately 5/16” (7.9 mm). This would allow heat and air-conditioning to escape, not to mention the unsightly gap between the door and frame. Standard gap (Swag) is 1/16”, specify “O” Swag for no gap.

Swaging on standard weight and heavy weight full mortise hinges provides 1/16” (1.6 mm) clearance between the leaves when the leaves are in the closed position. Full mortise hinges used on beveled doors will affect lockside clearance, especially for wide throw applications.

Security Features
Three additional features that are commonly used are: Non-Removable Pin (NRP), Safety Stud (SH), and Reverse Security Stud (RSS). These features are intended as deterrents only.

Non-Removable Pin
The Non-Removable Pin (NRP) hinge barrell is drilled and tapped to receive a small set screw which is tightened against the hinge pin. The pin has a groove in the position where the set screw makes contact, allowing the set screw to seat. The set screw is positioned so it cannot be reached unless the door is opened. If pin removal is necessary, the set screw is merely removed and the pin tapped from the bottom in the usual manner.

Safety Stud
The Safety Stud (SH) 3/16” (4.8 mm) projection is a feature that places a stud on one leaf and a locking hole on the other leaf. When the door is closed, the stud is anchored into the opposite leaf. Even if the hinge pin is removed, the door is secure because the leaves are locked together.

Reverse Security Stud
The Reverse Security Stud (RSS) 7/16” (11.1 mm) projection is a feature that has a welded stud projecting from the back of both leaves into the reinforcing plate of both the frame and the door. It is intended to keep the hinge locked in place from abuse of battering or trying to shear the hinge and screws. This feature is primarily used in prisons and psychiatric areas.

**Notes:**
1. All hinges or pivots, except spring hinges, shall be of the ball bearing type. Hinges or pivots employing other anti-friction bearing surfaces shall be permitted if they meet the requirements of ANSI A156.1, Standard for Butts and Hinges. Spring hinges shall be labeled and shall meet the requirements of ANSI A156.17, Standard for Self Closing Hinges and Pivots, Grade 1.

2. Heavy weight hinges 4-1/2” (114 mm) high, 0.180” (4.57 mm) thick shall be permitted for use on wide and heavy doors or doors that are subjected to heavy use or unusual stress.

3. Some manufacturers can provide fire doors with hinges of lighter weight that are not of the ball bearing type where they are part of a listed assembly and meet the requirements of ANSI A156.1, Standard for Butts and Hinges, and have been tested to a minimum of 350,000 cycles.

4. Pivot sets made up of components that are smaller or of a lighter gauge than shown in this table shall be permitted to be used, provided they meet the requirements of ANSI A156.4, Door Controls (Closers) and are in accordance with the manufacturer’s label service procedures.
Spring

NFPA 80 has restricted the use of architectural grade spring hinges to fire-rated doors of a maximum size of 3'0" x 7'0" (914 mm x 2134 mm). Hager spring hinges have been tested and labeled for up to a 4'0" x 8'0" (1219 mm x 2438 mm) door when a minimum of three springs are used. Spring hinges must be used with ball bearing hinges. Do not use plain bearing hinges with spring hinges.

Raised Barrel and Jamb Surface Mount

This option is used when the door is set back into the frame. The hinge knuckle is offset to allow it to clear the obstruction of the frame. There are three different types of applications:

On the Jamb Surface Mount (JSM) application, the door is double mortised to accommodate both hinge leaves; it is also referred to as double mortise. The Jamb Surface Mount may be applied to either a square or beveled edged door. For cased opening, sometimes referred as one leaf swagged flat.

The Raised Barrel for Square Edged (RBS) and the Raised Barrel for Beveled Edged (RBB) door applications are mortised into the frame and door as a standard full mortise hinge. Standard offset is 3/8" (10 mm). Depending on the depth of the frame, all three of these applications may restrict the degree of opening. Specify handing and door thickness.

Swing Clear

This is used when the passage area must be the full width of the opening. Swing clear hinges are designed to swing the door completely clear of the opening when the door is opened 95°. Assembled RH, reversible to LH. Can be ordered as LH.

Detention

Investment cast full mortise hinges (IHTH8953 Series) are the standard 4-1/2" x 4-1/2" (114 mm x 114 mm) size with a mortise depth of 0.187" (4.7 mm). These hinges can carry doors weighing up to 600 pounds.

Anchor

The anchor hinges are intended for use on heavy wood or hollow metal doors in high frequency applications such as hospitals, schools, and public use buildings. These hinges are especially designed for use on doors where additional hardware (door closers or holders) may cause excessive strain or abuse to the door, frame, and/or hinges.

Anchor plates may be attached to either the frame and/or door. This prevents the hinges from pulling loose on the door or the frame.

There are two variations of the reinforcing/anchor hinge: one has a single extension leaf which is mortised into the frame only; the second has two extension leaves. One leaf is mortised into the frame and the other leaf is mortised into the top edge of the door. It will be necessary to know if the doors are square edged or beveled edged.

Aluminum Entrance

A slip-in hinge, plain bearing or ball bearing, is used with aluminum doors and frames. These hinges are manufactured for low to average frequency and medium weight aluminum doors and frames.

1277 or BB1277 – Both leaves are drilled and tapped for insertion into a slot in the door and the frame.

1278 or BB1278 – One leaf has the standard template hole punch and countersinking and the other leaf is drilled and tapped for insertion into a slot in the door or frame.

The electric hinge provides an easy means to monitor the opening as well as transferring power from the frame into the door.

Electric hinge modifications can be either exposed on the surface of the hinge or concealed in the hinge. When concealed, the modifications are not visible and normally go undetected by personnel using the openings.

All of the Hager Companies electric hinges have been tested through UL in order that our products can be used on fire-rated or labeled openings.

Another important point to remember, an electrically modified hinge is for **low voltage power transfer only (48 volts or under)**. Higher voltages are not allowed because of the potential dangers. Also a consideration is the amperage rating of the power transfer hinges. Hager’s 18 gauge wires are rated for 50 volts AC/DC at 10 amps continuous. The maximum inrush is 20 AMPS for 4 seconds per wire. Hager 28 gauge wires include amperage ratings of 3.5 AMPS/continuous duty and 16.0 AMPS/intermittent duty (pulse).

Modifications are made to full mortise hinges. Swing Clear modifications are only available on heavy weight hinges. For other applications, consult Hager Engineering for availability.

It is recommended that the **CENTER HINGE LOCATION** be used with all electrically modified hinges.

Hager Companies recommends the use of a mortar box or jamb box in order to protect the wire terminations on the inside of the frame. If this box is not used, the grout that may be poured into the frame will destroy the wiring and usually void the warranty on the product.

**QUICK CONNECT HARNESS CABLES** - available on ETW 4, 8, and 12 wire. Not available with 18g wire.

Connectors installed on one end, pigtails on the other for easy installation in the field.

**E2 Electric Contact**
- Three or five knuckle
- Available on architectural grade ball bearing and anti-friction bearing
- Two contacts minimum required to transfer electrical current
- Design includes insulated copper contacts
- Furnished with non-removable pins

**E2/ E1S Electric Contact/ Switch**
- Three or five knuckle
- Available on architectural grade ball bearing and anti-friction bearing
- Single pole, double throw switch

**Electric Monitor Only**
- Three or five knuckle
- Available on architectural grade ball bearing and anti-friction bearing
- Available in steel, brass, or stainless steel
- 28 gauge wire standard
- Standard size available 4" (102 mm) through 8" (203 mm)
- Hinge pins are not field removable - NRP variation is not available
- Monitoring capability only
- Concealed subminiature snap action, SPDT switch
- Adjustment feature for a wide range of switch sensitivity
- Preset switching circuit
- For open loop secure, closed loop secure or single pole double throw (SPDT)

**ETM**
**Electric Through-Wire with Monitoring**
- Three or five knuckle
- Available on architectural grade ball bearing and anti-friction bearing
- Available in steel, brass, or stainless steel
- 18 and 28 gauge wire
- Standard size available 4" (102 mm) through 8" (203 mm)
- Hinge pins are not field removable - NRP variation is not available
- Both continuous electric conductors and monitoring capability
- Concealed monitor switch and 4, 8 or 10 continuous electrical conductors
- Adjustment feature for a wide range of switch sensitivity
- For open loop secure, closed loop secure or single pole double throw (SPDT)

CONCEALED AIR TRANSFER

The following hinges are available with a concealed air transfer (ATH) modification. They are available on architectural grade ball bearing and anti-friction bearing full mortise. Please note:

• ATH modification is for doors that require the transfer of compressed air.
• The hinges with ATH modification available use 5/32” (4 mm) plastic air tubing, have quick-connect fittings, and are capable of transferring 80-100 PSI through the air tubing.
• Steel or stainless steel hinges are acceptable for use on labeled or fire-rated doors.
• Hinge pins are not field removable.
• NRP and safety stud are not available.

**SPRING HINGE**

The following ECCO single acting spring hinge is for automatic closing of door. Please note:
- For use on 1-3/4” (45 mm) doors  
- For maximum versatility, use all spring hinges or a combination of spring and ball bearing hinges. Do not use plain bearing hinges.  
- Full spring tension may not be required on all hinges.  
- Strong wind conditions, drafts, carpeting drag, twisted/misaligned frames, or weatherstripping on doors may require additional spring hinges  
- UL approved for 4’ x 8’ door  
- Three (3) spring hinges and one (1) ball bearing hinge required for labeled openings

**EC1105**  
*Square Corner*  
Steel (ANSI K81071F)  
Note: the 4.5” x 4” size is only available in US26D.

Serving the needs of the homeowner, contractor, pre-hung door supplier, and hardware supplier, Hager residential hinges offer several finishes and styles to enhance the design on any home.

Hager residential hinges are available in square and two sizes of radius corners to match home designs ranging from traditional to contemporary. Coordinating finishes is one of many all-important detail aspects of the design process and we offer finishes ranging from stainless steel, chrome, nickel, antique brass, flat black and bright brass, which is making a comeback in the interior design industry.

Several of our most popular hinges are offered in bulk packs for large projects and unassembled to be used in large door assembly processes.

**Additional Notes for Spring Hinges**

For maximum versatility use all spring hinges or a combination of spring hinges and residential ball bearing hinges. Do not use plain bearing hinges.
- Full spring tension may not be required on all hinges.
- Strong wind conditions, drafts, carpeting drag, twisted/misaligned frames, or weatherstripping on doors may require additional spring hinges.
- Not intended for exterior outswing doors.
- For fire-rated openings use all 3 spring hinges.
- For doors over 7 feet, please call Hager Companies.

9400 SERIES BARN DOOR HARDWARE - CONESTOGA SERIES - HOW TO ORDER

IMPORTANT:
1. Track is ordered separately from hardware kit.
2. Track and Carrier Hardware are shipped in separate cartons.

Single Door Solution:

1) **9450 Track**: Specify length (48”, 72” or 96”).

2) **Carrier Hardware Kit**: Specify style – Includes all mounting hardware

Example:
- 9450 - 48
- 9450 - 72
- 9450 - 96

Bi-Part Door Solution:
If using two doors that are 3’ wide, order a 6’ track per door, for a total of 12’. This allows the doors to clear the door opening when in the open position. Order one carrier hardware kit per door and one Splice Kit.

To Order:
1) **9450 Track**: Specify quantity and length.

2) **Carrier Hardware Kit**: Specify quantity and carrier style. Example: Order 2 of part number 9453, 5” hook carrier style – Includes all mounting hardware.

3) **Splice Kit**: Order 1 of part number 1-269-8691 Flat Rail Splice Kit.

The Original
Hager Companies has been manufacturing the original Continuous Geared Aluminum Hinges for over 25 years. The unique design of Roton® consists of three important parts: an internal rolling contact gear profile, a high-strength cover channel and solid bearings made of celanex. Working together, these parts evenly distribute door weight and maintain door alignment for superior performance.

Lifetime Warranty
Hager Companies offers a lifetime warranty. We believe in our product line and warrant our Roton® aluminum continuous geared hinges are free of any defects and take pride in our workmanship. As long as the hinges are installed according to our instructions, the hinges will not fail under normal usage.

Fire-Rated Bearings
To make it easy for our customers to purchase our Roton® Continuous Geared Aluminum Hinge, we provide fire-rated bearings for all fire-rated hinges. The UL stamp denotes the hinge is fire-rated. Best of all we do not charge for this.

Friction Free
Roton® Continuous Geared Aluminum Hinges are lubricated to eliminate the need for any assistance in maintaining a quiet performance.

LEED/ Green Requirements
Environmentally-friendly building means thinking about every detail. Roton® hinges meet LEED requirements as they are made of recycled material.

Door and Frame Preparation
All Roton® Continuous Geared Hinges are surface applied. Cutout design and spacing coordination is thereby eliminated in both new construction and restoration work. Reinforcement plates are not required in doors or frames except where the gauge is too thin for the fasteners in relation to the door weight or where abusive operation is anticipated. Blank frames may be ordered with strike prep only or with a strike prep furnished on both sides to eliminate handing with any Roton® model that will cover the frame rabbet. Doors should always be ordered without cutouts except for use in labeled openings in which the tested door assembly may have manufacturing restrictions. Continuous frame mortar guards are desirable for masonry walls to avoid screw fastener interference with the mortar. An effective mortar guard made from an ordinary 1” (25 mm) x 2” (51 mm) stud, fastened to the back side of the frame can also be used. Check with both the frame supplier and the contractor for the best method. The main cause of door and frame breakdown is “kickback shock” transferred to conventional butt hinges or pivots. Installing Roton® hinges bond the door frame into a single, integrated unit, dissipating impact loads harmlessly.

Door Closers
Conventional surface or concealed sliding closers may be used with Roton®. (Note: Pivot type floor closers with a fixed, conflicting pivot point may not be used.) Closers will last considerably longer, adjust to operating requirements more readily and show consistent settings due to the reduced operating forces of Roton® hinging.

Standard Finishes
Roton® hinges are available in either satin etched, clear anodized aluminum (similar to US28), or dark bronze exterior anodized coating.

Special Anodizing
Roton® hinges are available in various colors, including black, and gold, as well as other anodized finishes with fasteners to match. Final assembly must be completed by Hager because of special non-removable metal coatings applied to all hinges during assembly. Users are cautioned against attempting to refinish any Roton® product. All hinges ordered in special colors should be ordered at the same time to guarantee finish uniformity. Supply color chip for best match.

Painted Hinges
Hager can supply unfinished materials to selected finishers for special projects which require unusual colors or coatings, but require final assembly be completed by Hager. Because of special non-removable metal coatings applied to all hinges during assembly, users are cautioned against attempting to refinish any Roton® product. Lead time of up to 10-12 weeks may be required.

Standard Lengths
Roton® hinge standard lengths are for 6’8” doors - 79”, for 7’ doors – 83”, for 7’2” doors – 85”, for 8’ doors – 95” and for 10’ doors – 119”, for convenience in application to nominal doors. This provides for threshold clearance, head clearance and door height allowances for carpeting. Other lengths may be ordered as non-standard items.

Roton® hinges are always installed flush with the top edge of the door. Recommended 1/8” (3 mm) for head clearance. Where multiple net heights are likely to appear on the same job, group the sizes to 1/2” (13 mm) increments to be consistent in appearance. Generally, up to 1/2” (13 mm) of door heel exposure is acceptable, but all Roton® hinges should be within 1”.

Extra Long Hinges
Hager Companies manufactures hinges over 119” (3023 mm) long as two separate lengths with a staggered joint for onsite connection. Hager will select hinge segment lengths from standard sizes for best economics in relation to quantity required. Hinging specifications are required to position the cuts inconspicuously and to finish symmetrical pairs in double door applications (25 mm) of the net door height.

Non-Standard Lengths
All non-standard length Roton® hinges are trimmed from the bottom only and conform to published templates. If the desired length does not go through any screw holes, the hinge is manufactured as requested. If the desired length would cut through screw holes, the customer would have two options: Hager will suggest the closest length that does not go through a screw hole. If that length is not acceptable and the project requires the exact length specified, the item becomes an industrial part and the interfering screw holes would be eliminated. If the desired length would cut through bearings slots, Hager will cut through the bearing slots. This would not affect the integrity of the hinge and the cover channel would cover the cut slots leaving an aesthetically pleasing product.
Field Modifications
While Roton® hinges can be cut in the field, any product modifications may void all warranties. Should in the field modifications be required, cut only from the bottom of the hinge. Do not cut through bearings or screw holes. When cutting electric hinges it is extremely important to clamp both hinge leaves securely to prevent hinge “chatter” which can damage the hinge’s internal wiring. Consult Hager Technical Service before proceeding.

Template Hinges
Hager Companies has developed templated hole patterns for Roton® hinge models in standard lengths. Drawings are available by contacting Hager Companies Customer Service or accessing the Hager website at www.hagerco.com. Due to normal variances inherent in the manufacturing process, Roton® custom length hinges are deemed by Hager to be non-templated.

Special Hinges
Any hinge may be ordered with special hole locations for unusual frame or door conditions. Please provide specifications for each leaf when placing an order.

Fire Ratings - Underwriters Laboratory Fire Rating File #A14627

780 Series Roton® continuous geared hinges with stainless steel studs are approved for use on 4’x10’ metal or wood swing type doors. 780 Series Roton® continuous geared hinges without stainless steel studs are approved for use on 4’x8’ single swing metal doors and 4’x10’ single swing wood doors used without stainless steel studs limited to 20 minute fire rating without hose stream.

- Hollow metal, tin-clad, sheet-metal and steel covered composite type rated up to and including 3-hours
- Wood composite doors rated up to and including 1-1/2 hours
- Wood core doors rated up to 20 minutes without hose stream, non-studded
- 780 Series Roton® continuous geared hinges meet requirements for positive pressure UL10C, UL10B and UBC7-2 Part 1

BHMA Certified

BHMA Certification Program was developed as a means for manufacturers of builders hardware to indicate compliance with American National Standards sponsored by BHMA. Participating manufacturers certify compliance with the standards based on a continuing program of passing the prescribed tests.

**FULLY CONCEALED WITH STUD**
These models are concealed between the frame and the hinge edge of the door. Models available include:
780-041HD, 780-041LL, 780-111, 780-111HD, 780-111LL, 780-112, 780-112HD, 780-112LL,

**HALF SURFACE WITH STUD**
These models have the frame leaf concealed between the frame and the edge of the door. The door leaf is mounted to the door with thru-bolts or screws. Models available include:
780-045HD, 780-046HD, 780-053, 780-053HD, 780-054HD, and 780-211HD.

**FULL SURFACE WITH STUD**
These models have the frame leaf mounted to the face of the frame and the face of the door. The door leaf is mounted to the face of the door with thru-bolts. Models available include:
780-057HD, 780-157, 780-157HD, 780-210, 780-210HD, and 780-257HD.

**CHECKING THE LOAD**
To assist in the selection of an appropriate Roton® hinge series, divide the door weight including the weight of the hardware by the number of bearings in the Roton® hinge under consideration, then use the following guideline, with a maximum 4’0” wide door:

**Painted Cover Channels**

Painted Roton® cover channels in bone white are offered as a standard stock color option. This is only available on the standard Roton cover channel.

**Polished Cover Channels**

Any Roton® hinge may be ordered with a polished clear cover channel (similar to US26) to complement clear anodized hinge leaves or a polished gold cover channel (similar to US3) to complement satin gold anodized hinge leaves.

* Round Back (RBCC) is not compatible with Molded Hospital Tip option.
**Bearing At Top**
This application allows for the bearing to be set at the very top of the cover channel. The cover channel is flush with the top of the geared hinge, preventing any obstructions or debris to be inserted in the top channel.

**780 Series Concealed Molded Hospital Tip**
780 Series Concealed and several Full Surface models including the 780-057, 780-157 & 780-210 can be prepared with a smooth tapered top bearing. This option is ideal for use in hospitals and correctional facilities to help provide a clean and safe environment. For Roton® Ligature-Resistant Opening Solutions see our TIPIT® section below.

**TIPIT®**
Designed to work with in new and retrofit applications, the TIPIT® was designed with safety in mind. When openings are fitted with the patented TIPIT® in conjunction with our Roton® Continuous Geared Hinge, this combination provides a safe environment while meeting institutional requirements for preventing objects from being hung from the top of the hinge. Available in two models, Concealed and Full Surfaces and two finishes, Gray and Black.

**Tamper Resistant Hinge**
This application is intended for use in hospital psychiatric areas and places of high security. The hinge is prepared with a hospital tip (concealed models only) and every other bearing is supplied with a set screw to lock against the inside of the cover channel for additional security.

**Dutch Door Hinges**
Hager Companies will prepare any of its hinge models for a dutch door application. The frame leaf is furnished as a continuous extrusion and the door leaf is cut to fit the dutch door heights specified. Handing, overall net door height, amount of clearance between the top and bottom doors, their individual heights and door and frame materials should be clearly specified.

**Special Holes**
Any hinge may be ordered with special hole locations for unusual frame or door conditions. Please provide specifications for each leaf.

**Bearing Replacement Kits**
Available in standard or heavy duty and in clear anodized or dark bronze anodized finish for 780 and 1200 Series Roton®.

**Marking Jigs**
Marking jigs are available to locate the centers of the top end frame screws. These jigs must be ordered at the same time as the hinges to ensure fabrication accuracy.

**Center Punches**
Self-centering punches are available for #12 countersunk screws that are supplied. To make sure screw heads seat properly, accurate center punching is required.

**Shim Stock**
For clearance between the door and frame that may be excessive, a continuous shim is helpful (applied behind the frame leaf only). Anodized aluminum extrusions are supplied with no holes.

**Item Marking**
Marking and special packaging for job-site identification.

**Replacement Moldings**
- **780-210M**
  Replacement door leaf molding for 780-210, 780-210HD, 780-211, 780-211HD, 780-213HD, 780-045HD, and 780-046HD. Furnished with Allen head set screw and wrench. Shipped in standard lengths for trimming in the field.

- **780-247M**
  Replacement frame leaf molding for 780-157, 780-157HD, and 780-257HD. Shipped in standard lengths for trimming in the field.

- **780-052M**
Fasteners
Hager Companies uses custom made, carefully engineered, and thoroughly tested fasteners exclusively. Each fastener is designed for ease of use as well as durability. Appropriate fasteners are furnished with each hinge, together with installation instructions for typical metal or wood doors and frames. The standard screw pack includes self-drilling screws. If wood screws are required, please specify on order and wood screws will be substituted.

Fasteners for Use with Hinges in the 500 Series
8 - 18 X 3/4” Truss Phillips Head Screw

Fasteners for Use with Hinges in the 750 and 780 Series Metal Doors or Frames (Undercut Head Phillips Countersunk Screws):
Two types of screws are available for metal doors and frames: the Dril-Kwik® screw (with drill point tip) and the thread forming screw (no tapping necessary). The #12-24 x 11/16” self-drilling screw has a machine thread in the screw shank. The #12-24 x 13/32” thread-forming screw has a machine thread in the screw shank.

The standard screw pack contains #12-24 Dril-Kwik® self-drilling machine thread. This screw has a hardened steel drill point built into the end of the screw, allowing it to be installed without a pre-drilled hole if the metal thickness is no more than 1/8” (3.2 mm). It forms its own threads as the screw is drilled into the door or frame. It is longer than most screws of the type because of the built-in drill point.

When installing the self-drilling screw, make certain that the installer is familiar with the proper use and torque settings of a screw gun. Proper center-punching is extremely important with self-drilling screws. If center-punching is omitted or incorrectly done, the screw will “walk” in the same way as a drill bit, resulting in cocked screw heads and improperly closing hinge leaves.

The optional self-threading screw is typically used on grout filled frames to prevent bowing of the frame. This screw has a short tapered section at the tip. A drilled pilot hole (range: 0.173” to 0.185”) is required prior to tapping.

Either of these screws may be used for the attachment of Roton® hinges to metal doors or frames, generally without reinforcement except in thin aluminum or with doors of very heavy weight or anticipated abuse. Both types require center-punching to ensure that the screw sits properly in the hinge leaf. Self-centering countersinking center-punches are available.

In all cases, care should be taken to ensure that no drill chips build up behind the hinge. It is best to premark the holes and drill for self-threading screws with the hinge removed, or hold the hinge very tightly against the door or frame when using the self-drilling screws.

Hinges normally requiring sex bolts will be furnished with suitable mounting holes. Blank leaves, special countersinking, or door fastening with pan-head screws are available upon request.

If special fasteners are required, customers must supply them except upon prior agreement. Please consult the factory for alternate fastener recommendations.

Fasteners for Use with Hinges in the 1200 Series
1/4” - 20 x 1” Undercut Flat Phillips Head Screw

Sex Bolts (Thru-Bolts)
On all applicable surface-mounted hinges, sex bolt sets are furnished in the hardware package together with a transfer punch for accurate marking of the 3/8” (10 mm) drilled holes required. The 1/4”-20 bolt has a 3/8” (10 mm) shoulder under a 9/16” (14 mm) pan head so that it can be reversed for exterior in-swing doors or for additional security.

Roton® sex bolts are intentionally designed to be shorter than the door thickness for proper clamping action with doors of slightly varying thickness and gauge in the 1” (25 mm) - 2-1/2” (63.5 mm) range. Unless otherwise requested, bolts suitable for the 1-3/8” (35 mm) - 1-3/4” (45 mm) range will be shipped. Shorter or longer bolts may be requested. Bolts that are outside the door thickness range of 1” (25 mm) - 2-1/2” (63.5 mm) must be provided by the installer.
Half Surface Models
780-045HD, 780-046HD, 780-053, 780-053HD, 780-054HD, 780-155HD, 780-211HD, 780-213HD, and 780-300HD (leaf thickness clearance not required for 780-300HD)

Designed primarily for work involving new doors and frames, one leaf concealed and one leaf surface mounted. They can also be used on retrofit work where a new door can be ordered to fit an existing frame if the existing door is made of wood and can be reduced in size to accommodate the 1/8" (3.2 mm) leaf thickness, or the frame is to be replaced and can be furnished with an oversized header.

Clearance required as follows:

Single Doors (Square and Beveled Edge)
A. Leaf thickness 1/8" (3.2 mm)
B. Additional allowance for frame irregularities 1/32" (0.8 mm)
C. Lockside clearance for single door 1/8" (3.2 mm)
Total 5/32" (4.0 mm)

A. Leaf thickness 1/8" (3.2 mm)
B. Additional allowance for frame irregularities 1/32" (0.8 mm)
C. Edge to edge clearance (recommended)* 3/16" (4.8 mm)
D. Second allowance for frame irregularities 1/32" (0.8 mm)
E. Second leaf thickness 1/8" (3.2 mm)
Total 1/4" (6.4 mm)

*For fire-rated doors, please refer to door manufacturer’s requirement for edge to edge clearance to maintain compliance with NFPA requirements.

Full Surface Models
780-057HD, 780-157, 780-157HD, 780-210, 780-210HD, and 780-257HD

The above models are designed for retrofit applications and require no special dimensioning. Full surface models are designed to be mounted to the exposed surface of the door and frame. No additional clearance is required except for door and frame painting.

Clearance required as follows:

Single Doors (Square and Beveled Edge)
A. Additional allowance for frame irregularities 1/32" (0.8 mm)
B. Lockside clearance for single door 1/8" (3.2 mm)

*For fire-rated doors, please refer to door manufacturer's requirement for edge to edge clearance to maintain compliance with NFPA requirements.
Concealed Electric Through-Wire and Monitoring:
- To order, use symbol “ETM” plus the number of wires required as a suffix, ie: 780-224LL 85” Bronze ETM - 4
- This combines the continuous electric conductors and the miniature switch to provide both power transfer and monitoring
- Four, six, eight or ten continuous electric conductors
- Miniature switch is incorporated into the frame leaf
- Specify handing and the dimension from the top edge of the door to the centerline of each electric modification location
- Templates regarding location of monitoring switch, available upon request

Exposed Electric Switches
- To order, use symbol “E1S” as a suffix, ie: 780-112HD 85” Clear E1S
- Miniature push button switch is incorporated in the hinge frame leaf to monitor position of the door
- Three 12” wire leads
- Each monitoring hinge only needs one E1S switch
- Specify handing and the dimension from the top edge the door to the centerline of the electric switch location
- Templates regarding location of contact switch available upon request

Concealed Electric Monitoring
- To order, use symbol “EMN”, as a suffix, ie: 780-224HD 119” Bronze EMN
- Miniature switch is incorporated into the frame leaf
- Three 12” wire leads
- Specify handing and the dimension from the top edge of the door to the centerline of electric monitoring location
- Templates regarding location of monitoring switch available upon request

Von Duprin EPT 2 or EPT 10 Electric Power Transfer Preparation
Concealed Leaf
Half Surface
- Hinge leaf cutout to accommodate power transfer device
- Specify handing and the dimension from the top edge of the door to the centerline of the power transfer location

Note: Special Electric Modifications and EPT locations may require additional charges if screw holes have to be moved. Contact Hager Companies Customer Service for charges.
Concealed Electric Through-Wire

- To order, use symbol “ETW” plus the number of wire leads, 12” per side required as a suffix, ie: 780-112HD 85” Clear ETW - 4
- Transfers power discreetly from building to door hardware
- 4, 8, 10 or 12 wire continuous electric conductors
- Specify handed and the dimension from the top edge of the door to the centerline of electric through-wire location
- Templates regarding location of through-wires available upon request

Removable Electric Through-Wire

- To order, use symbol “RETW”, ie: 780-112HD 85” Clear RETW
- Transfers power discreetly from building to door hardware
- 4” removable 10 or 12 wire ETW module can easily be removed for adjustment or service
- Specify handed and the dimension from the top edge of the door to the centerline of electric monitoring location
- Templates regarding location of module available upon request

Mortar Box - 430

- Serves as a mortar shield
- Overall dimensions: 9" (229 mm) length with tabs, 7" (178 mm) inside, 1-3/4" x 1-3/4" (45 mm x 45 mm) inside dimension
- Galvanized steel 0.040" (1 mm)
- Top and bottom knockouts for standard conduit fittings

Exposed Electric Contacts

- To order, use symbol “E” plus the number of contacts required as a suffix, ie: 780-112HD 85” Clear E4
- Transfers power to door in closed position
- Must have at least two contacts to transfer power
- Specify handing and the dimension from the top edge of the door to the centerline of the electric contact location
- Templates regarding location of contacts available upon request

Why Continuous? Hager Companies heavy duty stainless steel continuous hinges are designed and engineered to evenly distribute door weight along the full length of the door, which eliminates localized stresses on the frame and reduces hinge failure. Hinges also help eliminate stress on closers, automatic operators, and panic and locking hardware by helping doors to stay properly aligned and offer proven reliability that can stand up to the daily rigors of high-traffic, high-impact areas.

BENEFITS AND FEATURES

**Heavy Duty, High-Quality Construction**
Hager Companies stainless steel continuous hinges are 14-gauge type 304 stainless steel with lubricated nylon 6/6 bearings between each knuckle and stainless steel pin. They are corrosion resistant for swimming pool buildings, sewage and water treatment plants, and salt spray environments. These hinges are ideal for hospitals and other institutions where doors and frames are subjected to severe abuse.

**Superior Performance**
Hager Companies stainless steel continuous hinges allow doors to stay properly aligned, eliminating stress on closers, automatic operators, panic, and locking hardware.

**Ease of Installation**
Each hinge has symmetrical, non-handed hole patterns on standard sizes.

**Ideal for Retrofit**
Hager Companies 790 Series stainless steel continuous hinges use the exiting frame and cover the old butt hinge cut out locations.

**Energy Savings**
These stainless steel continuous hinges provide a permanent weather barrier and reduce air infiltration by creating a seal from top to bottom of the door at the hinge stile.

**Fire-Rated**
Hager Companies 790 Series stainless steel continuous hinges are stamped with an Underwriters Laboratories Inc. fire label. Refer to the individual catalog pages for UL listing information.

**Security**
Hager Companies 790 Series stainless steel continuous hinges eliminate the gap between the door and frame, so doors cannot be pried open.

**Privacy**
Hager Companies 790 Series stainless steel continuous hinges eliminate the gap or sightline at the hinge edge, offering privacy on hospital or toilet partition applications.

**Certification**
Hager Companies 790 Series stainless steel continuous hinges are approved for ANSI A156.26 Grade 1 for 150-pound doors.

**Added Features**
Moldings are supplied to cover exposed fastener heads on half-surface and full-surface models and are screwed in place. Models with hinge guards are supplied with adjustable screws allowing up to 1/4” (9 mm) width adjustment for doors to be squared accurately and easily in new installations and retrofits.

**Wide Throw**
The width of the hinge leaf can be extended in order to clear the trim or wall conditions.
DOOR AND FRAME PREPARATION
All 790 Series stainless steel continuous hinges are surface applied without cutouts. Cutout design and spacing coordination is thereby eliminated in both new construction and restoration work.

For models other than double edge guard models, reinforcement plates are not required in doors and frames except where the gauge is too thin or the material is too weak for the fasteners in relation to the door weight, or where abusive operation is anticipated. Consult Hager Companies Technical Service for more information.

Blank frames may be ordered with strike prep only or with a strike prep furnished on both sides with any model that will cover the frame rabbet. Doors should always be ordered without cutouts except for use in labeled openings in which the tested door assembly may have manufacturing restrictions. Continuous frame mortar guards are strongly recommended for masonry walls to avoid screw fastener interference with the mortar.

Standard Finish
All 790 Series stainless steel continuous hinges are brushed to a satin finish (US32D).

Special Finishes
Available in powder coat and offered in our stock colors listed in the price book. Lead time of up to 8-10 weeks may be required.

Recommended Lengths
All 790 Series stainless steel continuous hinges are always installed flush with the top edge of the door. Recommended head clearance is 1/8” (3 mm). Order each hinge equal to the net door height. In the field, trimming should be done from the bottom of the hinge only.

Custom Length Hinges
Hager Companies manufactures hinges over 119” (2023 mm) as two separate lengths. Hager will select hinge segment lengths from standard sizes for best economics in relation to length required. A special length should be specified from the net door height. To order, list the required hinge length dimension along with the “actual length” or “net door height.”

Custom Designs
For special designs and special applications, contact Hager Customer Service for more information. While such orders become subject to the change and cancellation policy, hole positioning will be optimized to ensure that the appearance and operation of the products are maintained.

Custom Hole Pattern
Any hole pattern or shape other than Hager’s standard hole pattern are available on all models. Contact Hager Customer Service for more information.

No-Hole (Blank) Hinges
Holes omitted for special applications (i.e. welded hinge) is available on all models. Contact Hager Customer Service for more information.
PRODUCT INFORMATION

Door Edge Guards
Various models are supplied with a 14-gauge stainless steel channel that wraps the door edge and protects the door edges from damage by carts, beds, and equipment. Other models offer protection to the jamb with a wrap-around guard. Refer to individual catalog pages for additional information. Edge guards for the latch side edge of the door are available through our Trim & Auxiliary product line.

Dutch Door Hinges
The frame leaf is furnished as a continuous leaf and the door leaf is cut to fit the dutch door heights specified. Upper and lower door leaves are prepped for extra screws. Handing, overall net door height, amount of clearance between the top and bottom doors, their individual heights and door and frame materials should be clearly specified.

Non-Rising Pin
The pin is held securely in place and will not rise or fall from the knuckles during use. The top and bottom plugs are permanently secured to the hinge.

Raised Barrel
For applications where the door is set back in the frame, the knuckle is offset to allow the hinge to clear the frame.

Replacement Moldings
Brushed aluminum replacement moldings with molding clips and fasteners are available in stock lengths for trimming in the field. This option is available for 790-903, 790-904, 790-906, 790-909.

Sheared Leaf
For narrow door thicknesses, leaf width can be trimmed. This option is available for 790-900, 790-903, 790-905, 790-909, 790-911, 790-915, 790-926.

Dust Free Bearings
Provide a clean and quiet operation as they prevent metal on metal wearing.

Tamper Resistant Hospital Tip
Concealed models, specifically 790-905 and 790-915, can be prepared with a tapered, 45° angled tip at the top of the hinge. These modified hinges are ideal for use in hospitals and correctional facilities to help provide a clean and safe environment.
FASTENERS

Hager Companies 790 Series stainless steel continuous hinges are provided exclusively with carefully engineered and thoroughly tested fasteners. Each fastener is designed for ease of use as well as durability. Appropriate fasteners are furnished with each hinge, together with installation instructions for typical metal and wood doors hung on metal frames. The standard screw pack includes Dril-Kwik® self-drilling screws for metal doors and frames as well as wood screws for wood doors.

Special adjustment studs and screws are standard on all models with the double door edge protection lip. The special adjustment studs and screws allow correction of door fit problems up to 3/8” (9 mm). Sex bolts are optional and must be requested at time of order. If special fasteners are required, customers must supply them except upon prior agreement. Please consult Hager Technical Service for alternate fastener recommendations.

Optional Sex Bolts
On all applicable full-surface and half-surface mounted hinge models, sex bolts can be ordered. Sex bolts are intentionally designed shorter than the door thickness to ensure proper clamping action of 1-3/4” (44 mm) doors of slightly varying thickness.

Security Fasteners
These fasteners improve building security and reduce hinge tampering. Security Torx are available in place of standard fasteners upon request.

Security Studs
These stainless steel security studs are mounted through the frame leaf into the door frame. Security studs are available in place of standard fasteners upon request.

Fastener Installation
Fasteners for both metal and wood applications are supplied standard with each hinge. The Dril-Kwik® self-drilling screw is used in metal door and frame applications and has an undercut head and a machine thread on the screw shank. The type AB wood screw is supplied for wood door and frame applications.

The Dril-Kwik® self-drilling screw's drill point allows it to be placed without pre-drilled holes when installed in a hollow metal frame less than 1/8” (3 mm) thick. It forms its own threads as it is drilled into the frame.

Mortar Guards, made of either styrofoam or wood, are recommended for new construction, eliminating the use of masonry bits. For existing grout-filled frames, pre-drilling is required before installation of the Dril-Kwik® self-drilling screws. Here, the screw acts as a machine screw since drilling has already taken place. Center-punching is recommended on both hollow metal and grout-filled frames to ensure that the screw seats properly in the hinge leaf. Stainless steel frames require pre-drilling.

In all cases, care should be taken to ensure that no drill chips build up behind the hinge. It is best to pre-mark the holes and pre-drill with the hinge removed or clamp the hinge very tightly against the door or frame when using the self-drilling screws.

When installing the self-drilling type screw, make certain that the installer is familiar with the proper use and torque settings of a screw gun. Proper center-punching is extremely important with self-drilling screws. If center-punching is omitted or incorrectly done, the screw will "walk" in the same way as a drill bit, resulting in cocked screw heads and improperly closing hinges.
Models 790-905, 790-926
Designed primarily for work involving new doors and frames. Clearance required as follows:

Single Doors (Square and Beveled Edged)
A. Hinge thickness 9/32” 7.1 mm
B. Additional allowance for frame irregularities 1/32” 0.8 mm
C. Lockside clearance for single door 1/8” 3.2 mm
Total 7/16” 11.1 mm

Pairs of Doors (Square and Beveled Edged)
A. Hinge thickness 9/32” 7.1 mm
B. Additional allowance for frame irregularities 1/32” 0.8 mm
C. Clearance between doors (recommended)* 3/16” 4.8 mm
D. Second hinge thickness 9/32” 7.1 mm
E. Second allowance for frame irregularities 1/32” 0.8 mm
Total 13/16” 20.6 mm

Notes:
- Some minimal clearance may be required for paint and/or weatherstripping.
- Not recommended for use on doors/panels that have a beveled edge on the hinge side.
- For fire rated doors, please refer to door manufacturer’s requirement for edge to edge clearance to maintain compliance with NFPA requirements.

Notes:
- Some minimal clearance may be required for paint and/or weatherstripping.
- For doors that are pre-beveled 1/8” (3.2 mm)-in-2” (51 mm) on the hinge edge, add 1/32” (0.8 mm) per door to the TOTAL clearance shown (Model 790-900 only). For Models 790-911 and 790-915, the hinge edge of the door should not be beveled.
Models 790-903, 790-904, 790-906, 790-909

Designed primarily for work involving new doors and frames. Clearance required as follows:

**Single Doors (Square and Beveled Edged)**
- A. Hinge thickness
- 1/8” (3.2 mm)
- B. Additional allowance for frame irregularities
- 1/32” (0.8 mm)
- C. Lockside clearance for single door
- 1/8” (3.2 mm)
- Total
- 9/32” (7.2 mm)

**Pairs of Doors (Square and Beveled Edged)**
- A. Hinge thickness
- 1/8” (3.2 mm)
- B. Additional allowance for frame irregularities
- 1/32” (0.8 mm)
- C. Clearance between doors (recommended)*
- 3/16” (4.8 mm)
- D. Second hinge thickness
- 1/8” (3.2 mm)
- E. Second allowance for frame irregularities
- 1/32” (0.8 mm)
- Total
- 1/2” (12.7 mm)

**Notes for 790-904 only:**
- Some minimal clearance may be required for paint and/or weatherstripping.
- For doors that are pre-beveled 1/8” (3.2 mm)-in-2” (51 mm) on the hinge edge, add 1/32” (0.8 mm) per door to the TOTAL clearance shown.

**Notes for 790-906 only:**
- The hinge edge of the door should not be beveled.

*For fire-rated doors, please refer to door manufacturer’s requirement for edge to edge clearance to maintain compliance with NFPA requirements.
ELECTRIC MODIFICATIONS

* For ease of ordering, Hager has established standard locations for power transfer cutouts. All standard location dimensions are referenced from the top edge of the door to the centerline of the power transfer cutout. Please specify handing.

Concealed Electric Through-Wire:
- Transfers power discreetly from building to door hardware
- Four, eight, or ten 24-gauge wires with 12" wire leads
- To order, use symbol "ETW" plus the number of wires required, as a suffix. Example: 790-900 HD 85" US32D ETW - 4
- Specify the handing and the dimension from the top of the hinge to the centerline of the electric through-wire location. ETW Centerline must be between two consecutive hinge knuckles. Please note, the clearance from the top of hinge to the underside of header is typically 1/16" to 1/8" (1.6 mm to 3.2 mm).
- Modification available on 790-900 and 790-915

Material: 14-gauge 304 stainless steel
Finish: US32D Satin
Clearance: 7/32” (5.6 mm) hinge side plus standard lockside clearance
Fasteners:
- #10-24 x 5/8” S/S Dril-Kwik® (metal frame/door)
- #10-16 x 1-1/4” S/S Type AB (wood door)

Length Options: Standard and custom lengths available

Door/Frame Reinforcements:
- Wood – None required up to 200 lbs.
- Metal – Recommended 16-gauge channel for heavier weight
- For metal doors, a 1/8” (3.2 mm) thick reinforcement plate is recommended along the hinge edge for proper thread engagement of the adjustment studs

Fire Rating: Up to 3 hour metal and 90 minute wood composite

FEATURES

- For doors 1-3/4” (44 mm) thick and up to 300 pounds
- 1/4” (6.3 mm) diameter stainless steel pin
- Dual 6/6 nylon bearings between each knuckle
- May be used with beveled or square edge doors
- 1/8” (3.2 mm) inset

Every Hager exit device is designed and engineered to assure you and your customers years and years of superior performance in a variety of commercial applications. Hager exit devices use fewer moving parts, are constructed with high quality materials and are backed by industry leading warranties.

All Hager exit devices meet or exceed accepted U.S. domestic and international standards. All are UL listed for panic or fire-rated hardware and comply with ANSI A117.1 for accessible buildings and facilities. Many models are also certified for Hurricane Resistant applications.

Hager exit devices were designed with ease of installation in mind. All are non-handed and packaged for convenience and versatility with thru-bolts, slotted strikes, and both wood and machine screws in every box. Minimal door prep is needed with Hager exit device escutcheon trim with the locking mechanism built inside.

Hager 4500 Series Exit Devices are ideal for use in heavy duty commercial applications including office buildings, medical facilities, schools, and hospitality structures. The Hager 4500 Series is designed and engineered to provide a lifetime of superior performance on doors in heavy duty commercial applications. Properly applied and maintained Hager 4500 Series Exit Devices and Trim are backed by a lifetime warranty, providing peace of mind from distributor to building owner. Go to www.hagerco.com for specific warranty conditions.

Hager 4500 Series Exit Devices are BHMA certified Grade 1 and meet Life Safety codes and Fire Safety requirements. The 4500 Series Rim and Surface Vertical Rod devices meet ANSI requirements to be listed as Severe Windstorm Components and are approved for High Velocity Hurricane Zone areas.

Extruded aluminum construction, stainless steel push bar cover, die cast caps and covers, and dead locking stainless steel Pullman type latchbolts provide premium security and performance at value pricing.

*Currently, no door manufacturer offers a listing over 90 minutes with doors swinging same direction. Consult wood door manufacturers for current UL listings.
Installation Made Easy
For the convenience of our customers, Hager Companies introduced several key features to the exit device market:

- Thru-bolts are included with every model. Wood and machine screws are also provided standard in every package.
- Slotted strikes speed up installation, allowing the installer to make easy adjustments to align the latch to the strike.
- Non-handed device offers added versatility and means less inventory.
- Escutcheon trim is surface mounted with the locking mechanism built inside, reducing door preparation and installation time by requiring fewer holes in the door.

Shim Kits
Shim kits are available for devices on doors with glass bead kits or other interfacing moldings. Each kit contains two 1/8” (3.2 mm) shims and the appropriate longer fasteners.

Dogging
Cylinder dogging or less dogging are available to replace the standard hex key dogging on panic exit devices. For cylinder dogging, specify CD on order or purchase 4926 for retrofit applications. Unit requires 1-1/8” mortise cylinder (part number 3902) with standard cam. For less dogging, specify LD on order.

Sizing
The exit device is cut for 36” (914 mm) and 48” (1219 mm) wide doors. For other door widths, cut exit device to appropriate length. Recommended overall length of exit device is equal to the door width minus four inches. The surface vertical rod devices are supplied for an 84” (2134 mm) opening standard, but can be ordered for a 96” (2438 mm) opening. Extension rods are available to accommodate openings taller than 96” (2438 mm) and up to 120” (3048 mm).

When ordering pairs, specify one device LBR and second device LBR with fire bolt, for example: 4501 LBR Fire 36” x 84” plus 4501 LBR Fire 36” x 84” EO with bolt OR 4501 LBR Fire 36” x 84” plus an approved automatic constant latching flush bolt.
2. Door size available with extended lead times.
3. Not available on Mortise Exit Devices.
4. Mortise trim does not match centerline of other 4500 Series trim. Cannot be used with 4500 Series Rim or Vertical Rod devices.
5. Johnston and Warren lever designs are handed. Specify LHR/RH or RHR/LH when ordering.
6. Only applicable to 4501 MRTN devices.
7. Extended lead time for flat black finish.

4500 SERIES - GRADE 1 SURFACE VERTICAL ROD DEVICE - LESS BOTTOM ROD (LBR)

WARRANTY
Lifetime warranty

FEATURES
Certification: BHMA Certified Grade 1 and meets life safety codes and fire-safety requirements. See charts on page 4 for details and options.

Covers: Stainless steel, zinc

Cover Tube: Aluminum

Dogging:
- Hex key dogging standard on panic-rated devices
- Less dogging available on panic-rated devices, specify LD
- Cylinder dogging is available on panic-rated devices, specify CD (3902 1-1/8" (29 mm) mortise cylinder sold separately)

End Caps:
- Zinc
- Flush end cap option available

Fasteners:
- Wood and machine screws
- Thru-bolts supplied standard

Latchbolt: Top - 1/2" (13 mm) throw, pullman type with automatic dead-latching, stainless steel

 Strikes:
- Stainless steel with stainless steel pin and roller - included standard with panic device
- Solid stainless steel - included standard with fire-rated device
- Surface applied to frame with slotted holes for easy adjustment
- Double door strike for use with surface vertical rod and rim device available

SPECIFICATIONS

Door Thickness: 1-3/4" (44 mm) - Standard up to 3", except with night latch (NL) function escutcheon trim which is 2-1/2"

Door Width:
- 36" (914 mm) field sizeable to 30" (762 mm) panic-rated door and 28" (711 mm) fire-rated door
- 48" (1219 mm) field sizeable to 36" (914 mm) panic- or fire-rated door

Projection:
- 3" (76 mm) in undogged position
- 2-5/8" (67 mm) in dogged position

Vertical Rods:
- Rods for 7' (2134 mm) doors - 33-1/4" (845 mm) top rod length
- Rods for 8' (2438 mm) doors - 45-1/4" (1149 mm) top rod length
- Extension rod kits available, 2' (610 mm) or 3' (914 mm) for doors over 7'

- Recommended for use on appropriately reinforced doors
- A spring loaded fire bolt 2-649-0166 must be used on fire-rated LBR devices used on a pair of doors to ensure the device's fire rating

TRIM
- 4500 Series escutcheon trim for vertical rod device is surface mounted with a variety of lever options (pp. 22-23)
- Pull plate trim (excluding 45PT)
- Vandal resistant
- Rim cylinder x optional pull

FINISHES
- Trim is not available in US32D
- Anti-Microbial available with US26D, US32D
4500 SERIES - GRADE 1 SURFACE VERTICAL ROD/LBR DEVICES - ELECTRIFIED

WARRANTY

• One-year on electrified components
• Lifetime on hardware components

FEATURES

Same as 4500 Series SVR Device

SPECIFICATIONS

Door Width:

• 36” (914 mm) field sizeable to 30” (762 mm) panic-rated door and 28” (711 mm) fire-rated door for devices with any monitoring switches
• 48” (1219 mm) field sizeable to 36” (914 mm) panic- or fire-rated door for devices with any monitoring switches
• 36” (914mm) field sizeable to 34” (864mm) door minimum for devices with motorized electric latch retraction or delayed egress
• 36” (914mm) door minimum for devices with electric dogging, alarm kit, delayed egress, or onboard delayed egress
• 48” (1219mm) field sizeable to 42” (1067mm) door minimum for devices with electric dogging or alarm kit
• 48” (1219mm) field sizeable to 40” (1016mm) door minimum for devices with motorized electric latch retraction
• 48” (1219mm) door minimum for devices with delayed egress or onboard delayed egress

FUNCTIONS

• ED - Electric Dogging
• RX - Request to Exit (field installation kit 2-649-5001)
• RX2 - Dual Request to Exit
• EDRX - Electric Dogging with Request to Exit
• ALK - Alarm Kit (kit 4940, tamper switch 2-649-1090)
• AI - Authorized Ingress
• RXAI - Request to Exit with Authorized Ingress
• LM - Latchbolt Monitor (2-649-0168)
• RXLM - Request to Exit with Latchbolt Monitor
• MLR - Motor Driven Electric Latch Retraction (field installation kit 2-649-5007)
• MLRX - Motor Driven Electric Latch Retraction with Request to Exit
• DE - Delayed Egress (must order wall mount controller 2-679-0630 separately)
• OBDE - Onboard Delayed Egress (Requires 1-1/8” - 1 3/8” length, 3978 Cloverleaf or equivalent tailpiece required)

• DE - Delayed Egress (must order wall mount controller 2-679-0630 separately)
• OBDE - Onboard Delayed Egress (Requires 1-1/8” - 1 3/8” length, 3978 Cloverleaf or equivalent tailpiece required)
4500 SERIES - DUMMY PUSH PAD

WARRANTY
Lifetime warranty

FEATURES
Application: For use with 4500 and 4600 Series Exit Devices
Cover Tube: Aluminum
End Caps: • Zinc
• Flush end cap option available
Fasteners: • Wood and machine screws
• Thru-bolts supplied standard
Available Electric Functions:
• RX - Request to Exit
• RX2 - Dual Request to Exit

SPECIFICATIONS
Door Thickness: 1-3/4” (44 mm) - Standard
Door Width: • 36” (914 mm) field sizeable to 27” (686 mm) door
• 48” (1219 mm) field sizeable to 36” (914 mm) door
Projection: 2-5/8” (67 mm)
Stile Width: • 2-1/8” (54 mm) - minimum stile width
• All stile widths are measured from door edge

FINISHES
• Anti-Microbial available with US26D, US32D
SPECIFICATIONS

Battery:
• Standard 9-Volt battery required
• Audible chirp and alternating LED color flash when battery is low

Alarm:
• 100 decibel horn sounds immediately upon pressing push pad

Cylinder:
• 1-1/8" or 1-1/4" Mortise cylinders acceptable
• Hager standard cam required
• Cylinder sold separately

Activation:
• Alarm is armed by turning key clockwise
• Alarm is disarmed by turning the key counter-clockwise
• Alarm is turned to service mode by turning the key counter-clockwise twice

Alarm Timing:
• Alarm will sound for either 1, 3, 5 minutes or continuously
• Times are selectable by on board switches

Warning Decal:
“Emergency Exit Only - Alarm Will Sound” on push pad of exit device

Indicator:
• LED Indicator
• Red LED will illuminate intermittently when armed
• Green LED will illuminate when unarmed
• Blue LED will illuminate in service mode
• Alternate colors flash when battery is low

Options:
• Tamper switch available that sounds alarm when end cap is removed
• Latch monitor switch is available that sounds alarm when latch is retracted without actuating the push pad
• Latch monitor switch typically used with Surface Vertical Rod devices
• When utilizing the latch monitor, the outside trim unit will also sound alarm

Output:
Alarm is equipped with output port

WARRANTY
• One-year on electrified components
• Lifetime on hardware components

**ELECTRICAL SPECIFICATIONS/RATINGS AND WIRE REQUIREMENTS**

**Electrical Specification/Ratings:**
- **ED:** 0.225 AMP @ 24 Volt +/- 2V
- **RX or LM:** 125 VAC (3 AMP current); 30 VDC (2 AMP current)
- **MLR:** 1 AMP in rush @ 24 VDC +/- 2V, 400 mA holding
- **DE:** Single, 430 mA; Tandem 680 mA @ 24 VDC
- **OBDE:** Single, 540 mA; Tandem 790 mA @ 24 VDC

**Wire Requirements:**
- Status switches (i.e. RX, LM, etc.) require 2 wires per switch to monitor a normally open (NO) or normally closed (NC) position
- All devices provide 3 wires per switch so both NO and NC positions can be monitored
- Monitoring both positions will require 3 wires per switch

**QUICK CONNECT**
Available on AI, ED, LM, MLR, and RX

**POWER SUPPLIES**
For power supply options see electrified section, pages 41-19.

4926 Cylinder Dogging Conversion Kit
For use with panic-rated 4500 Series devices
Packaging: One (1) each dogging plate, cylinder collar, cash box nut
Notes: • Mortise cylinder 3902 with standard cam, sold separately • Specify 36” (914 mm) or 48” (1219 mm)

4927 Bottom Latch Assembly
For use with 4500 Series Surface Vertical Rod exit device
Description: 1/2” (13 mm) throw, pullman type, held retracted during door swing, stainless steel
Packaging: One (1) bottom latch with cover and appropriate fasteners

4928 Top Latch Assembly
For use with 4500 Series Surface Vertical Rod exit device
Description: 1/2” (13 mm) throw, pullman type, held retracted during door swing, stainless steel
Packaging: One (1) top latch with cover and appropriate fasteners

4929 Top/Bottom Rod Replacement Kit
For use with 4500 Series Surface Vertical Rod exit device
Packaging: One (1) each 45-1/4” (1149 mm) rod, rod guide, rod connector, and appropriate fasteners

4929C Concealed Rod Replacement Kit
For use with 4500 or 4600 Series Concealed Vertical Rod exit device
Material: Hardened aluminum
Finishes: US26D
Packaging: One (1) each 46-5/8” (1184 mm) rod, rod connector and appropriate fasteners

4930S Shim Kit
For use with 4500 Series Surface Vertical Rod exit devices where a glass bead kit would interfere with exit device
Packaging: Two (2) each 1/8” (3 mm) shims and appropriate fasteners

2-649-0250/2-649-0257 Photoluminescent
Push bar cover option for 4500 & 4600 Series exit devices
Description: 2-649-0250 - 4500/4600 36”
2-649-0275 - 4500/4600 48”
Features: • Requires no wiring or maintenance • Recharges with exposure to ambient light
**4937 36” Extension Rod Kit**
For use with 4500 Series Vertical Rod exit devices

- **Packaging:** One (1) each 36” (914 mm) extension rod, rod connector, rod guide, plus wood and machine screws.
- **Notes:** Extension rod threaded on both ends; if cuts are required, cut the standard rod on non-threaded end.

**END CAPS**
For use with all 4500 and 4600 Series exit devices

- **Packaging:** One (1) each cap and bracket plus fasteners
- **Standard**

**2-649-0166 Fire Bolt Kit**
For use with fire-rated 4500 Series Vertical Rod less bottom rod device

- **Faceplate:** 1-25/32” x 1” (45 mm x 25 mm)
- **Bolt Diameter:** 7/16” (11 mm)
- **Bolt Length:** 1-1/2” (38 mm)
- **Materials:** Stainless steel
- **Packaging:** One (1) each fire bolt, plastic plug, head cover plug, and appropriate fasteners
- **Notes:** Required with a fire-rated pair of LBR or LLB devices to ensure rating.
The Hager 4600 Series is designed and engineered to provide a lifetime of superior performance on narrow stile doors (2-inch minimum) in heavy duty commercial applications. The 4600 Series design complements aluminum and glass construction and provides excellent durability for a range of applications. Go to www.hagerco.com for specific warranty conditions.

Hager 4600 Series Exit Devices are BHMA certified Grade 1 and meet Life Safety codes.

Extruded aluminum construction, stainless steel push bar covers, die cast caps and covers, and stainless steel latchbolts provide premium security and performance at value pricing.

4600 SERIES FIRE-RATED DEVICES (RIM Device only)

UL/cUL Listed for “A” Label Door Up to and Including 3 hours on 4’ x 8’ doors

Rim with Fire-rated Removable Mullion 4900UF UL/cUL Listed and Warnock Hersey Listed for “A” Label Door Up to and Including 3 hours on 8’ x 8’ doors
Installation Made Easy
For the convenience of our customers, Hager Companies introduced several key features to the exit device market.
- Thru-bolts are included with every model. Wood and machine screws are also provided standard in every package.
- Slotted RIM strikes speed up installation, allowing the installer to make easy adjustments to align the latch to
- Non-handed device offers added versatility and means less inventory.
- Escutcheon trim is surface mounted with the locking mechanism built inside, reducing door preparation and installation time by requiring fewer holes in the door.

Shim Kits (Rim only)
Shim kits are available for devices on doors with glass bead kits or other interfacing moldings. Each kit contains two 1/8” (3.2 mm) shims and the appropriate longer fasteners.

Dogging
Cylinder dogging or less dogging are available to replace the standard hex key dogging on panic exit devices. For less dogging, specify LD on order. For cylinder dogging, specify CD on order or purchase 4926 for retrofit applications. Unit requires 1-1/8” (29 mm) mortise cylinder (part number 3902) with standard cam.

Sizing
The exit device is cut for 36” (914 mm) and 48” (1219 mm) wide doors. For other door widths, cut exit device to appropriate length. Recommended overall length of exit device is equal to the door width minus four inches.

## Specifications

### Battery:
- Standard 9-Volt battery required
- Audible chirp and alternating LED color flash when battery is low

### Alarm:
- 100 decibel horn sounds immediately upon pressing push pad

### Cylinder:
- 1-1/8” or 1-1/4” Mortise cylinders acceptable
- Hager standard cam required
- Cylinder sold separately

### Activation:
- Alarm is armed by turning key clockwise
- Alarm is disarmed by turning the key counter-clockwise
- Alarm is turned to service mode by turning the key counter-clockwise twice

### Alarm Timing:
- Alarm will sound for either 1, 3, 5 minutes or continuously
- Times are selectable by on board switches

### Warning Decal:
- “Emergency Exit Only – Alarm Will Sound” on push pad of exit device

### Indicator:
- LED Indicator
- Red LED will illuminate intermittently when armed
- Green LED will illuminate when unarmed
- Blue LED will illuminate in service mode
- Alternate colors flash when battery is low

### Options:
- Tamper Switch available that sounds alarm when end cap is removed
- Latch monitor switch is available that sounds alarm when latch is retracted without actuating the push pad
- Latch Monitor Switch typically used with Surface Vertical Rod devices
- When utilizing the latch monitor, the outside trim unit will also sound alarm

### Output:
- Alarm is equipped with output port

## Warranty
- One-year on electrified components
- Lifetime on hardware components

### Electrical Specifications/Ratings and Wire Requirements

**Electrical Specifications/Ratings:**
- ED: .225 AMP @ 24 Volt +/- 2V
- RX or LM: 125 VAC (3 AMP current); 30 VDC (2 AMP current)
- MLR: 1 AMP inrush @ 24 VDC +/- 2V, 400 mA holding

**Wire Requirements:**
- Status switches (i.e. RX, LM, etc.) require 2 wires per switch to monitor a normally open (NO) or normally closed (NC) position
- All devices provide 3 wires per switch so both NO and NC positions can be monitored
- Monitoring both positions will require 3 wires per switch

The Hager 4700 Series is designed and engineered to provide superior performance on standard stile doors in a range of light commercial and standard duty applications. Properly applied and maintained Hager 4700 Series Exit Devices and Trim are backed by a five-year warranty. Go to www.hagerco.com for specific warranty conditions.

Hager 4700 Series Exit Devices meet Life Safety codes and Fire Safety requirements. The 4700 Series Rim device meets the requirements for a Severe Windstorm Resistant Component.

Made with superior materials and with dead locking stainless steel Pullman type latchbolts, the 4700 Series Exit Devices provide necessary security and performance at economy pricing.

Currently, no door manufacturer offers a listing over 90 minutes with doors swinging in the same direction. Consult wood door manufacturers for current UL listings.
Installation Made Easy
For the convenience of our customers, Hager Companies introduced several key features to the exit device market.

- Thru-bolts are included with every model. Wood and machine screws are also provided standard in every package.
- Slotted strikes speed up installation, allowing the installer to make easy adjustments to align the latch to the strike.
- Escutcheon trim is surface mounted with the locking mechanism built inside, reducing door preparation and installation time by requiring fewer holes in the door.

Shim Kits
Shim kits are available for devices on doors with glass bead kits or other interfacing moldings. Each kit contains two 1/8” (3.2 mm) shims and the appropriate longer fasteners.

Sizing
The exit device is cut for 36” (914 mm) and 48” (1219 mm) wide doors. For other door widths, cut exit device to appropriate length. Recommended overall length of exit device is equal to the door width minus four inches. The surface vertical rod devices are supplied for an 84” (2134 mm) opening standard, but can be ordered for a 96” (2438 mm) opening. Extension rods are available to accommodate openings taller than 96” (2438 mm) up to 120” (3048 mm).

Hager 4900 Series offers both a keyed removable mullion and a non-keyed removable mullion. Both are designed for use on double door openings with 4500, 4600 and 4700 Series Rim devices providing increased security and tighter closure, while providing easy adaptation for full width access. Our 4900 Series Mullions sets include a mullion tube, top and bottom brackets, and fasteners. Fire-rated mullions are UL listed for 3 hours on fire-rated pairs of doors up to 8 feet by 8 feet.

Hager’s 3300 Series Grade 3 tubular leverset is field reversible, with a thru-bolt design for ease of installation. This field reversible lock is designed with thru-bolts to make installation quick and simple. The 3300 Series is offered in four functions — Passage, Privacy, Entry, and Single Dummy — with four lever designs — Archer, August, Johnston and Withnell — to provide the perfect solution for suiting with other Grade 1 and Grade 2 products provided by Hager. Vertical markets that may benefit are assisted living facilities as well as multi-family.

- Key override allows latchbolt to be momentarily retracted with the key even though electrically locked. Note that locks that are electrically unlocked may not be locked via the key cylinder.
- Inside lever always allows egress
- Interface with life-safety systems
- Motorized locking and unlocking allows for low power consumption (new for 2018)

Function:
80 - Storeroom
82 - Institutional

Applications:
- Provides remote locking and unlocking ideal for door control where added security is necessary
- Stairtower doors
- Office doors
- Classrooms
- Elevator lobby doors
- Computer rooms
- Hospital equipment rooms
- Pharmaceutical storage rooms

Voltage:
- 3880ELEU - 12-24V AC/DC (250mA MAX in rush and 10mA MAX holding)
- 3880RX - 125V AC (3A) - 30VDC (2A)
- 3880LM - 125V AC (3A) - 30VDC (2A)
- 3880DPM - 28VDC (.3A)

Quick Connect:
Available option on EL, EU, RX, DPM, and LM. Compatible with Hager Quick Connect Harness Cable which can plug into Hager Hinges with Quick Connects for quick and accurate wiring of the door.

**Keying Options**

Keyed function locks are supplied keyed different unless otherwise specified.
- Keyed alike, 0 bitted, 1 bitted
- Master keyed (must specify quantity of Master keys where applicable)
- Construction master keyed
- Keyed to specific or existing number
- Submit master keying form (page 86)
- Extra cut keys (3908 - Cut 7-pin)
- Key markings: 1AA, 2AA etc. (per key)
- Key markings other than key set (per key)
- Cylinder markings (visual or concealed) - limited to 6 characters
- Do not duplicate standard
- Bitting lists are available, ordered separately from Master keyed order, specify 3998

**Notes:**
- Keys are cut bow to tip
- Must purchase capping block/press and key punch due to 140 pin spacing

**Hager Keyway (Conventional Cylinders)**

- Hager H1
- Hager H2
- Hager H3

**Rim Cylinders**

- **3901 Rim Cylinder**
  - 140 Pin spacing
  - Conventional cylinder supplied 7-pin only
  - Furnished with trim ring, mounting plate, and break off screws
  - Long tail piece standard
  - Supplied with two operating keys

**Mortise Cylinders**

- **3902 Mortise Cylinder**
  - 140 Pin spacing
  - Conventional cylinder supplied 7-pin only
  - 3975 standard cam attached and 3972 Adams Rite cam shipped loose in the box
  - Thread size is 1.150” x 32 UNS
  - Cylinder face diameter is 1.360”
  - Supplied with two operating keys
  - 1-1/8” (29 mm) standard length, 1-1/4” (31 mm) available, 1-5/8” (41 mm) for mortise exit devices
  - Must specify length, cam, keyway, and keying requirements

**Keys**

- **3907 Key Blank**
  - Hager keyways (H1, H2, H3, H12, H23, H123)

**Cut Key**

- Hager keyways (H1, H2, H3, H12, H23, H123)
- Specify keying required (masterkey, construction masterkey, control key)
Keying Options
Cores are furnished keyed different unless otherwise specified. Other keying options include:
• Keyed alike
• Master keyed (must specify quantity of master keys, control keys or additional change keys)
• Keyed to specific or existing number
• Key markings: 1AA, 2AA etc. (per key) - VKC
• Key markings other than key set
• Core markings (visual or concealed) - limited to 6 characters
• Do not duplicate standard
• Bitting lists are available, ordered separately from master keyed order, specify 3998
* Construction master keyed not available.
Notes:  • Keys are cut bow to tip
  • Must purchase capping block/press and key punch due to 140 pin spacing

Keyways (Hager) - H1, H2 and H3 SFIC Cores

3969
Combined Core 7-Pin
• Includes two change keys
• Finishes include US4 or US26D
• 140 Pin spacing

3909
Uncombined Core 7-Pin
• Includes two key blanks
• Finishes include US4 or US26D
• 140 Pin spacing

SFIC Keys

3907
SFIC Key Blank
Hager keyways (H1, H2, H3, H12, H23, H123)

3908

2 LEVEL SYSTEMS
Simple Master Key System

The master key symbol consists of TWO letters, AA. The change key numbers are added to the master key letters. The numbers come FIRST for a simple master key system, example: 1AA, 2AA, 3AA, etc.

3 LEVEL SYSTEMS
Grand Master Key System

The grand master keyset symbol is assigned ONE letter, starting with A. The master keyset symbols under this grand are assigned TWO letters, the first of which will be the same as the grand: AA, AB, AC, etc. are all masters under the grand A. (Caution: Do not use the letters I, O, Q or X because of the possible confusion with the numbers 1 & O. X is reserved for identifying cross keying.) Change key numbers come AFTER the letters, example: AA1, AA2, AA3, etc.

For master keyset symbols beyond AZ, insert a number between the letters to designate which pass through the alphabet they represent. A2A through A2Z represent the second pass through the alphabet of masters under the Grand A. A3A through A3Z would be the third pass through the alphabet. Change keys under these masters have the numbers suffixed in the usual way A2A1, A2A2, A2A3, etc.

If a cylinder is to be operated by its change key and the GMK only (No master), the change number is added to the GMK symbol. This is illustrated by the keyset symbol A1 in the schematic shown.

4 LEVEL SYSTEMS
Great Grand Master Key System

The great grand master is assigned the keyset symbol GGM. The rest of the symbols are the same as those in a 3 level system.

The great grand master keys under the GGM are assigned the keyset symbol of single letters of the alphabet A, B, C, D, etc., starting with A. The master keyset symbols under this grand are assigned TWO letters, the first of which will be the same as the grand: AA, AB, ..., BA, BB, ..., CA, CB, ..., etc. (Caution: Do not use the letters I, O, Q or X because of the possible confusion with the numbers 1 & O. X is reserved for identifying cross keying.) Change key numbers come AFTER the letters, example: AA1, AA2, AA3, etc.

For masters beyond A2, insert a number between the letters to designate which pass through the alphabet they represent. A2A through A2Z represent the second pass through the alphabet of masters under the Grand A. A3A through A3Z would be the third pass through the alphabet. Change keys under these masters have the numbers suffixed in the usual way A2A1, A2A2, A2A3, etc.

If a cylinder is to be operated by its change key and the GGM only (No grandmaster, no master), the change number is added to the GGM keyset symbol. This is illustrated by the keyset symbol GGM1 in the schematic shown.
SINGLE KEYED DIFFERENT (SKD) (Example: Narcotics Room, Pharmacies)
When requirements are such that no other key operates the cylinder (master, other change keys, etc.) they are referred to as “single keyed different” and given the keyset symbol SKD. When more than one SKD is required in a facility, they are numbered SKD1, SKD2, SKD3, etc.

NO MASTER KEY (NMK)
When keying requirements are such that all higher levels of master keys do not operate the cylinder, the suffix (NMK) is added to the keyset symbol. For example, AA1 (NMK) is operated by the change key AA1 only. Neither the A grand, nor the AA master operate the cylinder. A keyset symbol, AA (NMK) indicates the cylinder to be operated by the AA master only, the A grand does not operate the cylinder.

SELECTIVE MASTER KEYS
It is often useful in large keying systems to issue a high level master key to maintenance personnel which allows access across all master and grand master key boundaries of a keying system.

To designate that a lock be operated by a selective master key, suffix the symbol in parentheses to the standard symbol. Example: AA1 (ENG). This must be added every time the selective key is to operate and left off whenever the selective key is NOT to operate. For instance, you may lay out a system in which key AA1 is to operate two different offices. Inside one of them is an electrical cabinet which must be accessible to maintenance personnel carrying the ENG key. That lock must be specified as AA1 (ENG), while the lock for the other office must be specified as AA1.

Selective master key is a convenience feature which decreases the security of the cylinders it operates and limits the expansion and flexibility of the overall keying system. Each selective master key typically eliminates 20-25% of the capacity of the system where it is used, so it should only be specified when absolutely required. It is recommended that no more than one system-wide selective master key be used within the same system.

CROSS KEYING
Like selective master keying, cross keying is a convenience feature and will limit the expansion and flexibility of the overall key system. Whenever two or more different change keys such as AA1 and AA2 are both required to operate the same cylinder, the cylinder’s security is reduced. This is called cross keying. When the cross keying occurs under all the same higher levels (MK, GMK, GGMK), such as AA1 and AA2, it is known as controlled cross keying. When you combine keys under different higher levels (MK, GMK, GGMK), such as AA1 and AB1, it is known as uncontrolled cross keying, which you NEVER want to do.

Convenience may reduce cylinder security and hinder the overall key system expansion. Cross keying usually imposes limits on the flexibility and expansion of the overall keying system. This is especially true of uncontrolled cross keying. For these reasons, it is strongly recommended to allow personnel to carry more than one key. Cross keying should be discouraged whenever possible. However, when cross keying is required, it is specified as follows, and should be summarized at the beginning of each order. It cannot normally be added later. Each cross keyed set should also be limited to keys which are all under the same higher level master keys. Prefix the keyset symbol with the letter X (example: XAA3). All keys which are to operate the cylinder are to be listed following the keyset symbol with the phase “to be operated by” (“TBOB”, “OB”, “operated by” are also common phrases/abbreviations used. Example: XAA3, operated by AA1, AA2, AA, and A. Note that X is a cylinder designation only. The change keyset would be AA3.

NOTE: HAGER WILL NOT DO UNCONTROLLED CROSS KEYING DUE TO THE REDUCED SECURITY IT CAUSES.
CONSTRUCTION MASTER KEYING
Hager uses the lost ball method for construction keying for conventional cylinders. If you have ordered Small Format Interchangeable Core (SFIC), you will be able to order temporary cores (Blue & Red are stock). Permanent cores will be shipped with permanent keys.

Recommendation:
Use as many keyed alike groups to conserve bitting combinations. Study blueprints and/or master plans for campuses to identify areas where more than one door leads into the same space, and where several different areas are used by the same personnel. These areas should be keyed alike (use the same keyset symbol). This conserves key bitting combinations for future use as well as reduces the need to issue master keys. Remember, key system are much like a rubber band, it only stretches so far. You can stretch is horizontally to create more master keys, or vertically to create more changes under each master, but there is a finite number of combinations available.

Case #1 (Cross Keying)
Cylinder requires its own change key. The illustration depicts part of a small medical building where two doctors share a common receptionist. The receptionist gets the AA3 change key. Each doctor carries a key which operates only one office, but also operates the entrance from the corridor, by cross keying that cylinder to include the following keys to operates it.

XAA3, TBOB (To Be Operated By) AA1, AA2, AA and A.

Case #2
The hall door cylinder does not require its own change key. This illustration depicts a section of a floor in a dormitory. Each student’s bedroom change key operates the hall door cylinder. There is no need to construct a change key which operates only the hall door.

In this case, place an X at both the beginning and the end of the keyset symbol and a number between them. Example: X1X, X2X, etc. Again, always include the “TBOB” (to be operated by) phrase with a complete listing of the keyset symbols to operate the cylinder.

Hager Companies offers a comprehensive line of door control products designed and manufactured to meet a wide range of applications and uses. From humble beginnings in 1849 as a forger of wheel rims and hardware for Conestoga wagons, today Hager offers surface mounted and commercial grade closers, electromagnetic holders and overhead door holders and stops in our door controls product line. Hager door closers provide architects, contractors, and building owners a superior product with proven reliability. That makes them a no-risk choice for virtually any building type. Because these heavy duty, Grade 1 door closers are ideal for schools, hospitals, and other high use environments they have been installed in these locations all over the globe.

With Hager, you get a door closer that’s packaged with everything needed for quick installation, regardless of the application. Hager door closers are tri-packed for mounting three ways: parallel arm, regular arm, and top jamb. They are non-handed, packaged with a parallel arm bracket, self-drilling screws and thru-bolts at no extra charge, and adjustable for various door sizes.

Surface door closers are easy to install, with only a few holes for the body and the arm, requiring a minimum amount of preparation of the door and frame.

   7000 Series Accessories .......................................... 48
Surface door closers are easy to install, with only a few holes for the body, the arm and the bracket, requiring a minimum amount of preparation of the door and frame.

There are a number of factors to consider when choosing how to mount your closer. These factors can be influenced by aesthetics, environment, or application. The main things to consider when defining how to mount a surface door closer include:

- Architectural appearance
- Accessibility to the closer arm
- Space limitations of the frame above the door
- Space limitations on the top rail of the door
- Closer position on the door

There are three basic methods of mounting surface door closers to the door and frame: regular arm, parallel arm, and top jamb mounts. All Hager door closers are supplied standard with a tri-pack for mounting any of the three types of applications. The package includes regular, parallel, and top jamb arm mounts.

**Regular Arm**
The regular arm application is used when there is ample room on the top rail of the door and you are not concerned about the arm extending out away from the door. The closer body is mounted on the hinge side of the top rail of the door. The forearm is then mounted to the frame face by a mounting shoe. The arm projects at approximately a 90° angle away from the door. The regular arm mount will make the closer more power-efficient than the parallel arm or top jamb mount.

**Parallel Arm**
The height dimension of the top rail is an important consideration when using this application. The closer body is mounted on the top rail of the push side of the door. The forearm is mounted by a parallel arm bracket to the soffit of the frame. The arm is parallel to the door, which makes it less likely to be damaged and aids in the overall aesthetics. The efficiency of the closer may be reduced by the mounting applications.

**Top Jamb**
This is the preferred method of mounting a closer if you are faced with a narrow rail on a door. The closer body is mounted to the frame face above the push side of the door. The forearm is then mounted to the top rail of the door. The top jamb mount is more power-efficient than the parallel arm application.

Door Handing
Hager Companies’ surface door closers are all non-handed, meaning they can be placed on a door so that they will operate a left-opening or a right-opening door. Some of the accessories that can be ordered with these closers are handed and the hand of the door should be specified when ordering a closer with these components.

Closer Sizing
The American National Standards Institute (ANSI) has set the standard for sizing and has ensured that each manufacturer’s closers are tested to the same standards. The door closer sizing chart on page 4 shows the closer size required to fit your door size and application.

Meeting ADA Requirments
Doors and doorways that are non-labeled and part of an accessible route shall comply with Section 404 of the ANSI 117.1 standard. Door closers shall be adjusted so that from the open position of 90°, the time required to move the door to an open position of 12° shall be 5 seconds minimum. The maximum force for pushing open or pulling open an interior hinged door (other than a fire door) is five pounds. To maximize hinge life and assist in achieving ADA compliance, Hager recommends the use of anti-friction or ball bearing hinges with our door closer products.

Fire Doors
Fire doors shall have the minimum opening force allowable by the appropriate authority having jurisdiction.

Closer Adjustment
All Hager Companies’ door closers are equipped with key control valves that allow for easy adjustments while decreasing the chances for tampering.

Sweep and Latching Speeds
Two separate valves control the closing speed of the door. The sweep speed controls the speed of the door from full opening to within approximately 2° to 10° of the closed position. The latching speed valve controls the speed of the door from approximately 2° to 10° to full closing.

Backcheck
Backcheck starts at approximately 70° door opening and slows the door as it opens. This feature is not to be used as a positive stop. An auxiliary stop must be used.

Delayed Action
The delayed action feature is available for the 5100, 5200 and 5300 Series closers. The closing time between 90° and 70° shall be a minimum of 20 seconds, but is adjustable to be even slower.

Adjustable Spring Feature
The 5100, 5200 and 5300 Series closers offer an adjustable spring feature for sizes 1-6. Spring power of the closer can be increased or decreased by turning the power adjustment shaft clockwise.

Use of Door Stops
It is important to use an auxiliary door stop in order to protect the wall, trim, door, and closer. A stop should be used even when a closer with backcheck is used.

How to Select the Proper Closer
1. Size and Weight of Door: 5100, 5200 and 5300 Series closers are non-sized so that closing force can be adjusted in the field to accommodate various door sizes, weights, and applications.
2. Interior Application: Where possible, the standard regular arm application should be used as it is the most efficient in terms of power and control.
3. Exterior Application: Exterior doors require greater closing forces because of draft and wind conditions. Therefore, where possible, use an extra heavy duty arm for these applications.
4. Degree of Opening: The closer should permit the door to open far enough to allow for easy traffic flow. The selection of the proper arm and position on the door are very important.
5. Function: Closers can be equipped with special arms that can serve many functions such as hold open, positive stop, or hold open stop when necessary.
6. Abusive Environment: Closers can be equipped with extra heavy duty arms that can withstand vandalism and extreme use.
5100 Series Closers are heavy duty door closers constructed of cast iron to be installed on exterior and interior doors that are subject to high use and potential abuse. They are designed and engineered for reliability and superior performance. The commercial applications ideal for these closers include schools, medical facilities, institutions and hospitals as well as office buildings and any entrance door with high foot traffic.

5100 Series Closers have a full rack and pinion operation, with a heat treated steel piston and triple heat treated steel spindle. The closers are non-handed to permit installation on doors of either hand. The sizing is adjustable from size 1 through size 6. These design features make this closer the ideal choice for doors with a maximum weight of 330 lbs.

5100 SERIES - APPLICATIONS

REGULAR ARM MOUNT (PULL SIDE)

Opening: Templating allows up to 120°
Hold Open: Hold open points from 90° up to 120° with hold open arm
Frame Face: 1-1/4” (32 mm) minimum
Ceiling Clearance: 1-1/4” (32 mm) minimum
Top Rail: • Less than 3-3/4” (95 mm) requires drop plate, 5109
• Drop plate requires 2” (51 mm) minimum
Top Rail Clearance: 4” (102 mm) from the top of door

PARALLEL ARM MOUNT (PUSH SIDE)

Opening: Templating allows up to 180°
Hold Open: Hold open points from 90° up to 180° with hold open arm
Top Rail: • Standard hollow metal 5/8” frame stop
• Less than 5-1/2” (140 mm) from the stop requires drop plate, 5110
• Drop plate requires 2” (51 mm) minimum from the stop
Top Rail Clearance: 6-1/4” (159 mm) from the top of door

TOP JAMB MOUNT (PUSH SIDE)

Opening: Templating allows up to 120°
Hold Open: Hold open points 85° up to 120° with hold open arm
Frame Face: Less than 3-1/2” (89 mm) requires drop plate, 5115
Ceiling Clearance: Drop plate requires 4” (102 mm) minimum
Top Rail: Requires 1-3/8” (35 mm) minimum
Top Rail Clearance: 1-1/2” (38 mm) from the top of the door

5300 SERIES - ARMS

5303
Main Arm
- Non-handed
- Forged steel
- Mounts regular, top jamb, or parallel arm mount
- Add 5900 bracket for parallel arm mount

5906
Extra Heavy Duty Hold Open Stop Arm
- Non-handed parallel arm
- Forged steel
- Plunger hold open function
- Auxiliary stop in soffit shoe
- For use with 5200 and 5300 Series closers
- Not for use on fire-rated doors

5907
Extra Heavy Duty Stop Arm
- Non-handed parallel arm
- For use in abusive environments
- Auxiliary stop in soffit shoe
- For use with 5200 and 5300 Series closers

5910
Hold Open Arm
- Non-handed
- Forged steel
- Mounts pull side or top jamb with shallow reveal
- Friction hold open function
- Add 5914 Rev1 bracket for parallel arm mount

5911
Extra Heavy Duty Arm Assembly
- Non-handed parallel arm
- Forged steel
- For use with 5200 and 5300 Series closers

5912
Extra Heavy Duty Hold Open Arm Assembly
- Handed parallel arm (specify handing when ordering)
- Forged steel
- Provides friction hold open function
- Adjustable at the shoe
- For use with 5200 and 5300 Series closers
- Not for use on fire-rated doors

5956
Extra Heavy Duty Hold Open Cushion Stop Arm
- Non-handed parallel arm
- Forged steel
- Contains 5906 arm and 5950 spring cushion arm
- Plunger hold open
- For use with 5200 and 5300 Series closers
- Not for use on fire-rated doors

5957
Extra Heavy Duty Cushion Stop Arm
- Non-handed parallel arm
- Forged steel
- Contains 5907 arm and 5950 spring cushion
- For use with 5200 and 5300 Series closers

Track Arm
- Non-handed
- Extruded aluminum track
- Steel arm

5300 SERIES - ACCESSORIES

5301 Closer Body Only
- Aluminum alloy
- Heat treated steel spindle and piston
- Full rack and pinion operation

5302 Full Plastic Cover
- Cover projects 2-3/16” (56 mm) from door face
- High impact non-corrosive full cover - Standard
- Secured by two machine screws
- Available in plastic only

5900 Parallel Arm Bracket
- Used to convert regular or top jamb arms to parallel arm application
- For use with 5300 and 5400 Series closer arms
- Includes screw pack

5901 Pinion Cap
- High-impact, non-corrosive
- Supplied standard in 5300 and 5400 Series closers
- Fits over the pinion and extends 1” (25 mm)

5908 Long Rod and Shoe
- Use for reveals greater than 4” (102 mm) and up to 8” (203 mm)
- Non-handed
- Cast steel
- Use for top jamb application
- For use with 5300 and 5400 Series closer arms

5913 Blade Stop Spacer
- Required to lower parallel arm shoe to clear 1/2” (13 mm) blade stop of aluminum frames
- For use with 5300 and 5400 Series closer arms
- Includes screw pack

5936 Extra Clearance Parallel Arm Bracket
- Allows for up to 2” (13 mm) of clearance to mount additional hardware such as overhead door stops and holders
- Provides needed clearance not achieved with a standard soffit plate
- Includes screw pack

5950 Spring Cushion
- Non-handed
- Mounts to soffit shoe of 5125, 5961, 5906 and 5907 arms
- For use with extra heavy duty hold open and stop arms for abusive applications

5914 Hold Open Parallel Arm Bracket
- Supplied with all standard hold open arms
- For use with 5200 and 5300 Series closers only
- Includes screw pack

5915 Drop Plate - Narrow Rail Overhead Holder
- For use when an overhead door holder prevents normal top jamb mounting
- For use when a narrow rail prevents the closer from being mounted directly to the door
- For use with parallel arm and no cover
- For use when low ceiling clearance prevents normal top jamb mounting
- Includes screw pack
- Plate requires 3” (76mm) minimum top rail

5916 Drop Plate - Narrow Rail Parallel Arm
- For use when a narrow rail prevents the closer from being mounted directly to the door
- For use with parallel arm and full plastic cover
- Includes screw pack
- Plate requires 3” (76mm) minimum top rail
5917
Drop Plate - Top Jamb, Low Clearance
• For use with no cover
• For use when ceiling clearance is between 1-3/4" (44 mm) and 2-5/8" (67 mm)
• For use when an overhead door holder prevents normal top jamb mounting
• Includes screw pack

5304
Screw Pack - Standard
• Self-drilling wood screws
• Self-drilling machine screws
• For 5300 Series closer only

5902
SNB Screw Pack - Standard
• Sex nuts and bolts for 1-3/4" (44 mm) doors
• Machine screws
• For use with 5200, 5300, 5400 Series closers only

5903
SNB Screw Pack - Optional
• Sex nuts and bolts for 1-3/8" (35 mm) doors
• Machine screws
• For use with 5200, 5300, 5400 Series closers only

5904
SNB Screw Pack - Optional
• Sex nuts and bolts for 2" (51 mm) doors
• Machine screws
• For use with 5200, 5300, 5400 Series closers only

5905
SNB Screw Pack - Optional
• Sex nuts and bolts for 2-1/4" (56 mm) doors
• Machine screws
• For use with 5200, 5300, 5400 Series closers only
5400 Series Closers are ideal for light duty commercial applications. 5400 Series Closers have a heat treated steel piston and triple heat treated steel spindle. The closers are non-handed to permit installation on doors of either hand. The sizing is adjustable from size 2 through size 5. The design features make this closer the ideal choice for doors with a maximum weight of 200 lbs.

Hager Companies offers a line of electromagnetic door holders with built-in protection and low residual magnetism so they release easily even in applications meeting ADA requirements with minimal spring force door closers. These features make the electromagnetic holders a great solution for both safety and convenience and are ideal solutions for applications in hotels, hospitals and nursing homes.

Hager electromagnetic holders are designed for virtually any remote door release application and are ideal for holding doors open until released by a fire alarm or switching device. When deactivated the electromagnetic holders help to control the spread of fire and smoke by the simultaneous release of doors from an open to a closed position. The electromagnetic holders can be utilized independently or with the smoke detector systems.

The electromagnetic holders include a door mounted armature and a floor or wall mounted electromagnet. The features of this hardware include: dual voltage capability, very low current draw for energy efficiency, silent operation and an adjustable catch plate.

### DUAL VOLTAGE (REAR VIEW SHOWN)

### EXTENSION ROD/ADJUSTABLE EXTENSION ROD

To calculate extension rod length needed, use the formula below based on style holder being used.

**Flush mount:** Measure distance from door to wall when held at desired opening. Subtract 3” (76 mm) to obtain extension rod length needed.

**Recessed mount:** Measure distance from door to wall when held at desired opening. Subtract 2-3/8” (60 mm) to obtain extension rod length needed.

**Surface mount:** Measure distance from door to wall when held at desired opening. Subtract 4-5/8” (117 mm) to obtain extension rod length needed.

See example below using flush mount.

ELECTROMAGNETIC DOOR HOLDERS - GRADE 1 HEAVY DUTY COMMERCIAL

WARRANTY
One-year warranty

FEATURES
- Ideal for hospitals, hotels, schools, and other commercial buildings
- Designed for use with self-closing fire and smoke barrier doors
- Low current draw
- Fail safe: when electrical current is interrupted, doors release to close automatically

Certification:
- UL/ULC listed
- Meets ANSI 156.15 for C00011
- California State Fire Marshall listed (CSFM)
- City of New York MEA approved
- Factory Mutual

Body:
Zinc alloy

Voltages:
Standard dual voltage AC or DC inputs of 12 & 24V, 24 & 120V, 24 & 220V models

Holding Force:
Typical holding force of 25-40 pounds; performance value can be increased to 110 pounds on special applications

Mount:
Single or double coil floor, surface, flush, and recessed mount

SPECIFICATIONS

Total Projection:
- Recessed mount: 2-11/32" (60 mm)
- Flush mount: 3-1/16" (78 mm)

Because Hager Companies is committed to providing our customers with a full line of door hardware, we offer both a heavy duty and standard duty option in our overhead door holders and stops product line. They are mounted at the top of the door to eliminate tripping hazards and vandalism that are typical of floor or wall mounted stops. The purpose of the overhead door holders is to absorb the abusive shock with a heavy duty spring. They evenly distribute the load and impact along the entire track of the unit. Overhead door holders and stops are compatible with a variety of door closers and are ideal for meeting the demands of high traffic areas.

Hager Companies overhead door holders and stops have been engineered and designed to meet the requirements of many door applications. The streamlined channel design along with the adjustment arm accommodates various door sizes and applications. The adjustable arms simplify the selection by combining door width ranges into only two sizes of overhead door holders and stops. This feature makes installation simple and minimally impacts a customer’s inventory.
Concealed Mounted
The installation of concealed overhead door holders and stops requires that the jamb bracket be mortised flush with the bottom of the jamb. The arm and channel must be mortised into the door so the arm is flush with the top of the door. Concealing the overhead door holders and stops in the top of the door creates a more attractive architectural look.

Single Acting Door
A cutout made for the arm on the stop side of the single acting door.

Double Acting Door
Double acting doors require a cutout for the arm on both sides of the door.

Surface Mounted
Surface mounted overhead door holder and stop installation requires the jamb bracket be surface mounted on the stop of the frame. The channel is also surface mounted on the face of the door. Hollow metal doors and jambs must be reinforced to provide necessary strength for the holder specified.

Door and Frame Reinforcement
Hollow metal frames must be properly reinforced with 3/16" (5 mm) thick plates/channels that are at least 12” (305 mm) long. Hollow metal doors must be properly reinforced with 3/16" (5 mm) plates that are at least 2-1/2” (64 mm) wide over the length of the device. Templates and installation instructions are available online at www.hagerco.com.

Selecting Degree of Hold Open or Stop
Overhead door holders and stops are designed to function effectively from 85° to 110°. The recommended minimum degree of hold open would be set at 95° to put the door lever, pull, and panic hardware beyond the flow of traffic.

When selecting the degree of hold open for doors opening against a wall or back to back, there is approximately 5° to 7° of spring engagement beyond the hold open or initial stop point, this is the dead stop.

For dead stop templating, the degree of opening should be set 5° to 7° less than the point of required dead stop to accommodate the full compression of the shock absorber.
OVERHEAD DOOR HOLDERS AND STOPS - HOW TO ORDER

Selection Steps:

1. Determine the required grade needed
2. Determine the required function
3. Determine if a surface or concealed mount is required
4. Finally select one of two sizes to fit the opening

#### Product Group
- **60** - Standard Duty Overhead Door Holders and Stops
- **70** - Heavy Duty Overhead Door Holders and Stops

#### Functions

**16 - Stop Only**
- Concealed Mounted: ANSI CO1541
- Surface Mounted: ANSI CO2541

The stop only function provides a reliable method of door control. A shock absorbing spring stops the door. It is UL Listed for fire-rated components.

**UL Classification**
The stop-only models are classified by Underwriters Laboratories (UL) as Miscellaneous Fire Door Accessories. This classification applies to the use on either hollow metal fire doors or wood fire doors of any rating. The accessories have been investigated to determine that when properly installed with accordance to the manufacturer's instructions, they do not adversely affect the fire-rating of the fire door or fire door frames.

**17 - Hold Open**
- Concealed Mounted: ANSI CO1511
- Surface Mounted: ANSI CO2511

The hold open function provides a selective hold open function with easy to adjust tension. It may be turned on or off and includes the stop only function. It is not for use on fire-rated openings.

**15 - Friction**
- Concealed Mounted: ANSI CO4531
- Surface Mounted: ANSI CO5531

The multi-point friction hold open function mechanism is adjustable for resistance to door movement. It is not for use on fire-rated openings.
OVERHEAD DOOR HOLDERS AND STOPS - 6000 SERIES GRADE 2 STANDARD DUTY

WARRANTY

- Five-year warranty

FEATURES

- Standard screw pack
- For use on exterior and interior doors
- Ideal for office buildings and other standard duty commercial applications

Certification:

- BHMA Certified ANSI A156.8
- UL/cUL Listed for up to 3 hours (stop only)
- UL10C Positive Pressure Rated (stop only)
- UL10B Neutral Pressure Rated (stop only)

Materials:

- Steel
- Stainless steel

Mounting Style:

- Concealed
- Surface

Doors:

- Single acting doors for concealed and surface mounted
- Double acting doors for concealed mounted only

Functions:

- Stop Only
- Hold Open
- Friction

Handing:

- Non-handed

Openings:

- Degree of opening is fully adjustable and can be adapted to changing needs between 85° to 110°

SPECIFICATIONS

Door Thickness:

- 1-3/4” (44 mm) thick door - Standard
- 1-3/8” - 2-1/4” (36-57 mm) thick door - Optional

Fasteners:

- Standard screw packet included for wood or metal door and frame applications

Notes:

- Adjustable arms provide easy installation
- Slide track design
- Adjustable in the field
- Heavy shock absorber spring provides 5° to 7° compression before deadstop
- Special templating upon request

FINISHES

- US10B and US3 (For steel)
- US32D (For stainless steel)

Hager offers a comprehensive product line of electronic locking devices ranging from strikes, delayed egress systems, and magnetic locks.

Electric door strikes allow for a range of functionality for any access control system. Ranging from an exterior door such as an employee entrance or an interior door such as a stairwell, Hager’s electric strikes have a variety of universal features as well as factory configurations to accommodate a range of locksets, doors, frames, applications, and building codes.

Delayed egress systems are ideal for security, safety, and loss prevention applications. Many of Hager’s delayed egress systems are installed in public facilities such as airports to control pedestrian traffic. Other Hager units are installed in brick and mortar retail stores to prevent theft while other installations include assisted living facilities to protect patients and childcare facilities to protect children.

Typically used on exit doors, when unauthorized egress is initiated when in the locked mode. The system delays egress through the door for 15 or 30 seconds (where approved). Meanwhile, the person exiting must wait while personnel or security respond. The door unlocks after 15 seconds has elapsed, permitting egress. A signal from the fire life safety system will release the lock for uninhibited egress in an emergency. Typical installations include airports, convention halls, wholesale stores, retail stores, long term care, drug and alcohol rehab, psychiatric care, infant nurseries, museums, art galleries, warehouses, and technological facilities.

Hager’s magnetic locks are designed to be used on interior doors, perimeter exit doors, and entrances that require fail safe emergency release. Hager’s magnetic locks have no moving parts and provide positive and instantaneous release, whether caused by a signal from the fire command center, remote control or access control.

## MODELS

| 2925 | 4-7/8” (124 mm) faceplate for aluminum, wood, and hollow metal frames |

## WARRANTY

One-year warranty

## APPLICATION

- Cylindrical locksets with up to 5/8” (15mm) throw latch bolts
- Access controlled ingress for fail secure or fail safe openings (field selectable)
- Economy option provides great performance and value

Latch:

1/2” (13 mm) [5/8” (16 mm) with 1/8” (3 mm) door gap]

## FEATURES

Components:

- Quick and easy installation with low profile 1-1/4” (32 mm) backset
- All stainless steel parts with durable diecast body for corrosion resistance
- Compact low profile design with internally mounted solenoid and factory supplied mounting tabs
- Non-handed (reversible)
- Latch status output (standard)

APPLICATION
Heavy duty electric strike
Designed for installation in hollow metal frames with Grade 1 cylindrical and mortise locksets with up to 3/4” (19 mm) throw latch bolts and 1” (25 mm) deadbolts
Designed for new construction and retrofit applications
Field selectable fail safe or fail secure (default setting) with no disassembly
For use on fire-rated and non fire-rated doors
*Fail safe is not permitted on fire-rated doors

FEATURES
Components:
● Retrofits existing ANSI 4-7/8” (124 mm) strike prep - no centerline relocation
● Fail secure standard; field reversible to fail safe (no disassembly)
● Up to 3/4” (919 mm) latch bolt and 1” (25 mm) deadbolt
● Non-handed (reversible)
● 1/8” (3 mm) horizontal alignment adjustment
● Factory tested 2,500 lbs.
● Exceeded 1,000,000 cycles
● UL tested 1,500 lbs.
● 70 ft-lb dynamic strength
● Internally mounted solenoid, no heat in keeper
● Tamper resistant
● All stainless steel parts with durable diecast body for corrosion resistance
● Plug in tail connectors

Certification:
● ANSI A156.31 compliant, Grade 1

## LOCKING DEVICES - ON BOARD DELAYED EGRESS

### MODELS
- 4501 OBDE: On Board Delayed Egress Exit Device

### WARRANTY
- One-year warranty

### APPLICATION
- Control pedestrian traffic
  - Airport & Public Facility Security and Safety
  - Loss Prevention
- Wandering Patient and Infant Protection (Compatible with Hugs® and other patient tracking systems)
  - Intended for single or double doors that require panic hardware

### FEATURES
**Components**
- 15 (or optional 30) second egress delay
- 1 or 2 second nuisance delay
- Built-in function keys switch provides alarm and lock reset, 1 to 30 second bypass, sustained bypass, and additional key switch
- Control inputs include 1 to 30 second request-to-exit and access bypass with anti-tailgate and alarm reset
- Field selectable trigger modes from exit device (N/O or N/C)
- Field selectable automatic or manual power up after emergency release or power loss

**Built-In Annunciation:**
- Armed mode
- Nuisance mode
- Irreversible egress mode
- Release mode
- Digital countdown display
- Field selectable voice notification or tone
- Field selectable male voice with security message or female voice with safety message

**Monitoring Outputs:**
- Armed status
- Egress initiation status
- Released status

**Power Up Modes:**
- Field selectable automatic or manual power up after emergency release or power loss

  - Field selectable door prop alarm
  - Alarm sounds when the door has been left open after selected bypass time has elapsed
- Anti-tailgate feature
- Alternating 85db tone and voice message

**Control Inputs:**

- Remote access control and REX input, field adjustable for 1, 15, 20, or 30 seconds
- Remote reset input
- Manual power-up input
- Emergency release input
- Anti-tailgate input

**Monitoring Outputs:**

- Door secure and unlocked output
- Delayed egress activation alarm output

**Certifications:**

- ANSI certified, ANSI Grade 1

**Code Compliance:**

- International Building Code (IBC) 1008.1.8.6 Delayed Egress Locks

## LOCKING DEVICES - 2941 MAGNETIC LOCK

### WARRANTY
- One-year warranty

### MODELS
- **2941**: 600 lbs. holding force (272 kg)

### APPLICATION
- For interior door traffic control where physical attack is not a concern

### FEATURES
- **Components**:
  - Designed for system integrators, distributors, installers, and building owners presently using low cost import or private label brand access control hardware
  - Interlocking quick mount assembly
  - Provides superior, less obtrusive appearance compared to stainless steel epoxy sealed magnetic locks
  - Full monitoring is standard
  - Door status, lock status and bi-color LED included
  - Adjustable mounting bracket with choice of self-drilling and tapping mounting screws or machine screws
  - Wire access chamber with terminal block
  - Printed circuit board with voltage and current spike protection
  - Instant release anti-residual magnetism circuit

Certification: ANSI/BHMA A156.23 Grade 1, Compliant

### ELECTRICAL SPECIFICATIONS

UNIVERSAL HEADER BRACKET

Used in lieu of angle brackets, a universal header bracket provides a faster mounting solution, saving time and labor costs. Reduce potential for missized and misaligned mounting holes, broken taps, removal of broken taps. Combined with interlocking easy mount assembly, save up to a half day’s labor with the installation of 12 locks.

- Solid 1” (25 mm) bar provides higher security and superior aesthetics
- Machined wire chase provides concealed and secure wiring
- Multiple pre-drilled and tapped mounting holes to accommodate the use of several different locks on either 4” (102 mm) or 4-1/2” (114 mm) aluminum frames

LOCKING DEVICES - 2961 SERIES MAGNETIC SHEAR LOCK

MODELS
2961 Single magnetic shear lock with 2000 lbs. holding force (907 kg)

WARRANTY
One-year warranty

APPLICATION
For commercial grade hollow metal and wood doors and frames and Herculite doors with top rails

FEATURES
• Concealed, high security, Fail Safe locking mechanism
• Incorporates floating armature assembly and special alloy steel locking tabs on both lock and armature assemblies
• May be adjusted both vertically and laterally to compensate for wide door gaps and warped or misaligned doors

Components:
• 2,000 lbs (907 kg) holding force without current inrush or high operating temperature
• 8″ x 1-1/2″ (203 mm x 38 mm) lock
• Integrated electronics
• 1-5/8″ (41 mm) depth for 1-3/4″ - 2″ (44 mm - 51 mm) frames
• Armature supplied with lock (specify type required - ITC, FTC, or HTC)
• Door static sensor ensures door is at rest and aligned, before the magnet is permitted to energize (eliminates the potential for lock misalignment)
• Lateral adjustment of shear tabs to compensate for warped or misaligned doors, permitting accurate locking
• Vertical adjustment of both the armature and the adjustable delay relock sensor compensates for wide door gaps
• Unique floating action for easy armature lift when the magnet is energized and provides ability to overcome wide door gaps
• Alloy shear tabs ensure continued high holding force
• No profiling of the soft armature steel that may be prone to wear and reduced holding force
• Advanced electronic circuitry that incorporates door static, positioning and timed relock sensor and automatic voltage sensing for 12/24 VDC input
• Noise dampeners reduce the noise associated with locking and unlocking

OPTIONS
MBS
• Bond sensor indicates proper armature contact or reduced holding power due to improper armature contact or tampering
• SPDT 0.25 amp

DPS
• Door position switch indicates door open or closed
• SPDT 0.25 amp maximum

As the demand for access controls continue to grow, Hager Companies offers proven, reliable, and innovative solutions. While access control keypad devices are fairly definitive, customer requirements and building codes can vary. Hager Companies keypad product line offers solutions for these differing demands and requirements.

Key switches are ideal for a range of electrified openings such as an auditorium or gate operation that you might find near a hotel pool. With many different types of applications, key switches are an economical and viable devices in many installations.

Hager’s line of heavy duty keypads has an array of ideal installations. The 2915 is perfect for secure areas such as a records archive room or server room. The 2916 and 2916P are ideal for outdoor installations such as college dormitories, apartment buildings, remote buildings, and office buildings.

Hager Companies provides proven and reliable products for the ever growing access control market. For more information, please visit the Hager Companies website at www.hagerco.com
# Access Controls - 29KS Key Switch

## Models
29KS - Key switch

## Warranty
One-year warranty

## Application
- Access control
- Automatic gate operation
- Alarm shunt
- Alarm reset
- Machine operation

## Features
- Provides an economical method of providing authorized control for a variety of applications
- Choice of several contact configurations ensures compatibility with virtually any system
- Compatible with U.S. standard 1.125” and 1.25” mortise key cylinders and interchangeable core cylinders (not included)
- Compatibility with a new or existing facility mechanical key system is maintained
- Standard switch assemblies are single gang box mounted

### Components:
- Single gang, wall mounted, recessed key cylinder
- Tamper resistant, recessed cylinder
- Tamper resistant spanner screws
- Heavy duty all steel assembly
- 20 gauge stainless steel faceplate
- Large actuator for positive and consistent activation
- Compatible with 1.125” or 1.25” mortise cylinder (non included)

### Functions:
- **ASD**: Alternate Action (on/off) SPDT
- **MSD**: Momentary SPDT
- **ADD**: Alternate Action (on/off) DPDT
- **MDD**: Momentary DPDT

### APPLICATION

- Single gang indoor keypad
- Designed to control access of a single entry point for facilities with up to 500 users
- Each user assigned a personal identification number (PIN)

### FEATURES

**Components:**

- Blue backlit, moisture-resistant keypad
- 3/32” (2 mm) thick stainless steel faceplate
- 1/4” (6 mm) wall extrusion depth
- 500 users, 4-6 digit PIN codes
- 4 outputs, 2 relay and 2 solid status outputs timed or latching (on/off)
- Assign entry PINs to relays 1 and/or 2
- LED status: access, lockout
- Tactile audible key press, select volume
- Timed anti-passback
- Keypad tamper lockout
- Code activated timed entry PIN disable
- Request-to-exit/Enter input, egress keypad input
- Choice of door sense/relay inhibit input functions (forced entry, door ajar, inhibit relay 1 or 2, auto relock when door closes)
- Choice of 2 solid status output functions (alarm shunt, forced entry, door ajar, tamper lockout, keypad active)

### ELECTRICAL SPECIFICATIONS

**Inputs:**

- **Voltage:** Auto Sensing 12 to 24 VAC/DC
- **Current:** 30mA typical, 150 mA maximum
- **Operating Temperature:** -20° to 130°F (-30° to 54°C)
- **Operating Humidity:** 5 - 95% (non-condensing)

**Outputs**

- **Relay 1:** Form “C”, 5 amps @ 28VDC
- **Relay 2:**
  - Form “C”, 2 amps @ 28VDC
  - Switch to common outputs 3 & 4, 100 mA @ 30VDC

ACCESS CONTROLS - DOOR PROP ALARM

29EA
Door Prop Alarm
Key Switches

DESCRIPTION
• Provides audible alarm when a door is accessed or left open
• Installs in single gang or double gang enclosures
• Compatible with U.S. standard 1.125” and 1.25” mortise key cylinders and interchangeable core cylinders (Sold Separately)

FUNCTIONS
• N - No Key Switch
• M - Mortise Cylinder Switch (Sold Separately)
• K - Key Switch

FEATURES
• Audible sirens with adjustable timer settings
• Bypass status indicator light
• Vandal-resistant aluminum construction with security screws
• Optional key switch or mortise cylinder
• Adjustable Timed Delay
• Exit Alarm on Door Opening
• Automatic or Manual Alarm Reset
• Output Relays
• Integral Bi-color LED Status Indicator
• Compact Universal Mounting
• 85dB Piezo Buzzer Alarm

ELECTRICAL SPECIFICATIONS
Inputs: 12 or 24 VDC
Voltage: Dry, N/O or N/C (Selectable by on board jumper), Door Contact (Sold Separately)
Trigger Input: Remote Reset/Bypass Input: Dry, N/O or N/C. Reset by momentarily shorting the input when alarmed. Bypass by shorting & holding the input when secure.

OUTPUTS
Alarm Output: Form C, 2A @ 30VDC max
Auxiliary Output: Form C, 2A @ 30VDC max. Follows Door Contact input, or Alarm output (fieldselectable)

LED Indicators: Green - Normal Operation
Red - Alarm Activated

CYLINDER

Just as important as access controls are egress controls. With fail secure openings, egress controls send a signal to unlock the locking device. With low energy automatic operators, knowing acts are needed to send signals to the power operator. These are all essential functions to an electrified opening. Hager Companies provides a wide range of egress controls that will satisfy your customers while being easy to install.

Electrified cylindrical locks, mortise locks, and exit devices all require power provided to them. The most effective way to do this is to run power through the middle of the door. With Hager, you can select the hinge type that you need and that your customer wants and know that all of those products can be electrified. Stay with the proven name in hinges – Hager. Since 1849, Hager has been manufacturing hinges in the U.S. and as we continue to build on our rich history, we will continue to bring our customers reliability, value, and peace of mind. Whether you need electrified conventional hinges, electrified geared Roton hinges, concealed power transfers or a transfer loop, knowing that you chose Hager as your preferred hinge brand will prove to be a wise decision.
ELECTRIC POWER TRANSFER DEVICES - HEAVY DUTY

The functionality of power supplies differ based on the electrified components and their intended use. In order to have an optimized and properly operational electrified opening, the power supply should fit the opening, not the other way around. Hager offers different power supply solutions for different types of openings.

The 2901 and 2902 are specifically designed to operate electric latch retraction exit devices.

The 2903 is designed to optimize the functionality of Fail Safe or Fail Secure locking devices that interface with the building’s alarm controls, card readers, keypads, and other access control systems.

The 2904 is designed to optimize openings that include a locking device and automatic door operator.

The 2908 and 2909 are modular designs that provide functionality for any type of opening whether it is an electric latch retraction exit device, locking devices that interface with other access controls, door operators with sequencing locking devices, or combination of all of those or just something completely different.

POWER SUPPLY & DOOR CONTROLLERS - 2908

MODELS
2908  1A Modular Access Control Power Supply

WARRANTY
One-year warranty

APPLICATION
- Modular design allows customization of each power supply
- Regulated modular access control power supply
- Equipped with a high performance transformer and highly reliable electronic components
- Filtering and output voltage regulation provide protection and ensure the longevity of all system components

FEATURES
Components:
- Fire alarm input
  - Provides simultaneous release of all Fail Safe/Fail Secure locks and door holder in case of emergency
- Circuit breaker protected AC input voltage - secondary output and battery backup status
- Separate PTC protected charging output
- Optional dual 12 VDC or 24 VDC outputs
- Standard California compliant manual release

ELECTRICAL SPECIFICATIONS
Input:
- 600mA @ 115 VAC, 50/60Hz
- 230 VAC optional

Output:
- 12/24 VDC, 1A
  - Field selectable

Battery Charger:
- 13.5/27 VDC, 500 mA

MECHANICAL SPECIFICATIONS
Dimensions:
- 4” (102 mm) W x 12” (305 mm) H x 12” (305 mm) D
- 12 gauge steel

ACCESSORIES
2-679-0661
- 5 Amp hour battery backup
  - Uses a separate, protected output for charging - includes a low battery disconnect that protects the battery from potential damage during extended battery powered situations
  - When multiple batteries are used, install in parallel to increase current, or install in series to increase voltage. For more information, please contact Hager Tech Support.

2-679-0662
- 12 VDC Output Regulator Module
  - Enables dual 12V and 24V output

2-679-0664
- Universal Relay Module
  - Multiple field selectable operational modes for up to two door stations

NOTES
ELR
- Not suitable for use with solenoid actuated Electric Latch Retraction (ELR) exit devices
- Suitable for motor driven ELR exit devices

### WARRANTY

- One-year warranty

### APPLICATION

- Provides power and control for openings with an electrified locking device and automatic door operator

### FEATURES

**Components:**
- Filtered and regulated 24 VDC output
- 2A load capacity
- Class 2 rated outputs
- Overload, over voltage, and short circuit protection
- Automatically accepts 120 or 240 VAC input
- Built in fail safe or fail secure locking device controller
- Built in dry contact output for automatic door operator input
- Auxiliary 24 VDC constant voltage output (1 amp max output)
- Separate input for activation switch on entry and exit side of opening
- Fire alarm input
- Adjustable time delay

### ELECTRICAL SPECIFICATIONS

**Input:**
- 900mA @ 120 VAC, 60Hz
- 600mA @ 240 VAC, 50/60Hz

As more and more buildings are becoming ADA compliant, more options need to be made available. Hager’s low energy operators allow you to do just that without a long list of part numbers to keep track of. Instead, Hager’s low energy operators are customizable so that you can meet your customer’s requirements and expectations each and every time.

The 8400 Series is Hager’s premium low energy operator that reduces installation costs by being designed in a unique way that allows for one person installation and each unit includes an on-board programmer so that the installer programs one unit and then uses a flash drive to set up the other units in the same way with the same functionality.

Hager Companies 8400 Series Low Energy Power Operator meets ANSI/BHMA A156.19 standards for power assist and low energy operators and is designed to meet the requirements of door openings that occasionally have the need for an automatic opening. These devices can be used on single and double doors including double egress applications. This door opening solution provides a consistent closing and opening of the door, which is especially beneficial in situations that require compliance with the Americans with Disabilities Act (ADA). The use of Hager's Low Energy Power Operator provides easy access for not only people with disabilities, but also allows for manual operation of the door when necessary.

The 8400 Series is designed for ease of installation, allowing it to be installed by a single person. It also provides a quiet, smooth operation preventing any unwanted noise in the opening and surrounding area. The use of a digital display makes programming the operator uncomplicated and provides a resourceful tool for maintaining the device and assessing its status.

In addition to the Low Energy Power Operator, Hager offers a full range of actuators to be used in conjunction with the operator. The switches available for activation of the operator come in a variety of sizes and options, including wireless and hard wired. Hager also offers an option that exceeds the California Building Code, Section 1117B.6 by providing a push plate that meets height, reach range, and operation requirements for those with disabilities.

Note: Optional arm shoe drop plate is available for applications with a top rail less than 5”. See page 9 for additional information.

## Warranty

Two-year warranty

## Application

- For use on fire-rated and non-fire-rated outswing or inswing doors
- Built-in adjustable door stop for protection against wind or abusive environments
- Operates as a manual closer with or without power

## Features

### Application

- Single person installation
- Pre-drilled mounting holes for ease of installation
- Three Operating Modes (On/Off/Hold Open)
- Designed for single doors from 36” to 48” (914 mm to 1,219 mm)
- Designed for double doors from 60” to 96” (1,524 mm to 2,438 mm)
- On-board power supply

### Operational Functionality

- Built-in adjustable door stop for protection against wind or abusive environments
- Interfaces with electric door hardware
- Operates as a mechanical closer if power is disconnected
- Obstacle recognition upon opening and closing
- Blow open function for smoke ventilation

### Programmable Functionality

- Boost on Close (selectable On/Off)
- Power Assist Close
- Power Boost Close - motor assist under wind and stack pressure
- Motor Hold Close
- Power Open and Hold - for smoke evacuation
- Adjustable Opening Force Limitation
- Adjustable Opening and Closing Speeds
- Adjustable Opening Angle
- Adjustable Hold Open Time for Door Activators (1 sec to continuous)
- Sequential Operation (push to open/push to close operation)
- Built-In Stop - Manual swing to 180°/ Power swing to 100°
- Fire Alarm input shunts swing activations until FACP is manually reset
- Internal LCD display
- Memory is flash upgradeable

## Certification

- ANSI A156.19 compliant
- UL/cUL Listed for up to 3-hours
- UL10C Listed for Positive Pressure Rating
- ADA compliant

Actuators are what allow the “knowing act” of a low energy operator. Hager offers various styles and types of actuators that will appeal to every installation. The typical 4.5” and 6” square or round actuators are available along with Hager’s line of jamb operators. For more unique installations or installations with wheelchair traffic, refer to the low profile actuators that can be activated in a 36” range from ground up.

APPLICATION
- For use with ADA low energy power operators
- Employs capacitance technology similar to smart devices to operate low energy doors
- Ideal installations include medical facilities, assisted living facilities, offices, clean rooms, and schools

FEATURES
- Touchless design reduces the spread of bacteria and germs
- LED illumination increases plate visibility
- Stainless steel faceplate provides durability while also reducing visible deterioration caused by abrasive cleaning agents
- Beveled edges
- Various design options
- Adjustable detection zone
- Audible alert (selectable On/Off)

2-659-0178  Push to Open text and handicap logo - Wireless
2-659-0179  Push to Open text and handicap logo - Hard wired

WARRANTY
One-year warranty

APPLICATION
• For use with ADA low energy power operators
• Ideal installations include medical facilities, assisted living facilities, offices, clean rooms, and schools

FEATURES
• Mounts to any flat surface
• Embossed graphics ensures durability
• Stainless steel faceplate provides durability while also reducing visible deterioration caused by abrasive cleaning agents
• Weather resistant
• Beveled edges
• 36” x 36” activation area and low profile 1” depth
• Four separate switches to allow activation from any angle
• Exceeds California Building Code, Section 1117B.6

Certification: NEMA Rated

SPECIFICATIONS
Finish: US32D with text and/or blue logo
Faceplate: 16 gauge, 304 stainless steel
Backplate: 1/8” thick aluminum
Transmitter Frequencies: 433 MHz
Dimensions: 6” (152 mm) W x 36” (990 mm) H x 1 (25 mm) D
Fasteners: Due to various mounting types, no fasteners are supplied with the actuator

FEATURES
• For use with Hager’s 4.5” square and 4.5” round actuators
• Can be mounted on existing or newly poured concrete
• UV resistant plastic cap allows for wireless transmissions

SPECIFICATIONS
Material: Carbon steel
Mounting Bracket: Stainless steel
Dimensions: 41.5” H x 6.25” W x 4.25” D (with cap attached)
Weight: 35 lbs.
Fasteners: Screws, expansion anchors, washers and nuts
Note: Push plates not included - must order separately
Pedestrian sensors are programmed with the door path and if there is anything within the path that was not mapped, it will stop the door from opening. These are useful on any ADA opening. Typically, assisted living facilities, daycare facilities, healthcare facilities, education institutions, multi-family, commercial structures, and government buildings all have ADA openings.
2-659-0332  
Bodyguard Overhead Presence Sensor Frame Mounted

**DESCRIPTION**  
Overhead presence sensor designed for pedestrian automatic doors.

**APPLICATIONS**  
- Mounts to the frame to provide protection for pedestrian automatic doors
- Prevents a closed door from opening and an open door from closing when a pedestrian is in the detection zone

**FEATURES**  
- Versatile sensor can be used on single swing, simultaneous pair, dual egress and folding doors when coupled with an interface / lockout device
- Maximum flexibility with separate pattern width, depth and sensitivity for open and closed door states
- Visible LED monitoring indicator
- Active infrared technology and presence detection
- Easy installation and adjustments with optional programming remote
- Immune to electrical and radio frequency interference

**SPECIFICATIONS**

- **Technology:** Triangulation
- **Mounting Angles:** 0° to 10° (5° is default setting)
- **Input:** 12-24VAC/VDC (50-60Hz VAC)  
  1A @ 60 VDC/125 VAC  
  0.5 - 9s Hold Time
- **Frequency:** 50-60 Hz
- **Temperature:** -22°F - 140°F
- **Relay Hold Time:** 0.5-9.0 seconds
- **Dimensions:** 11.8” (W) x 1.9” (H) x 1.9” (D)
- **Opt. Accessories:** 2-659-0333 - Programming Remote  
  2-659-0334 - Mounting Kit
PEDESTRIAN PRESENCE SENSORS - ACTIVE INFRARED SAFETY SENSOR

2-659-0335 / 2-659-0336
Superscan Active Infrared Safety Sensor

DESCRIPTION | Door mounted

APPLICATIONS | • Low energy swing doors
• Designed to mount at the top of the door to reduce accidental damage

FEATURES | • Detect the presence of a pedestrian, while the door is opening and closing using triangulation
• Each module detection zone can be adjusted independently
• Active Infrared with background suppression allow for infinite presence detection
• Each module detection zone can be adjusted independently

SPECIFICATIONS
Technology: Active infrared
Models:
- 2-659-0335 - Single module unit
- 2-659-0336 - Single unit w/ master and slave modules
Power Supply: 12-24 VAC/VDC
Detection Range: 0" - 96" (0'-8')
Max. Mounting Height: 96" (8')
Detection Time: < 50ms
Detection Mode: Presence (up to 8')
Input Inhibit: 12 – 24 VAC ±10% / 12 – 24 VDC
±10% /Inhibited when voltage is applied
Contact Relay: 1 A @ 30 V (resistive)
0.1 s – 4.5s hold time
LED Indicators
Master:
- Red LED = Detection
- Green LED = Active Output
- Red LED = Detection
Operating Temp: -30°F - 140°F
Dimensions: 34.5"(L) x 1.95" (W) x 1.89" (H)
Functions Selection:
- Detection mode - NO or NC
- Normal mode
- Background analysis mode

Individual (2-659-0335) or single w/ slave module (2-659-0336)
Accessories can make any ordinary installation unique. Hager offers different wireless transmitters and receivers that are commonly used in executive installations or other highly automated installations.
ACCESSORIES

433 MHz Transmitters and Receiver

- Universally compatible with any type of automatic door application
- Used for wireless activation or sequencing of doors
- Receiver can be programmed with up to 100 transmitters
- Activation of transmitter utilizes a rolling code providing a protected signal

2-659-0237 RELAY BOARD
- 24VDC
- Current draw: 40mA
- Contact rating: 5amp/220 VAC or 28VDC DPDT contacts

FEATURES
- Transmitters can be programmed to multiple receivers
- Optional delay - no delay programming
- Toggle or pulse mode selectable by DIP switch
- Red LED on receiver verifies transmission and delivers troubleshooting assistance
- Red LED on transmitter ensures transmission and battery life
- Wire leads plug into terminals on Hager actuators - 2-659-0184 and 2-659-0185

SPECIFICATIONS
Frequency: 433 MHz
Input Voltage: 12 to 24 VAC/VDC
Radio Control Type: Digital
Emitted Radio Power: -28.7dBm (transmitter)
Number of Transmitters per Receiver: 100 maximum transmitters
LED Functions: Red = Relay Activity
Blue = Receiver / Transmitter Learn
Dimensions: Receiver - 2.75” x 2.125” x 1.0”
Transmitter - 2.75” x 1.375” x 0.6”
Certifications: CE, FCC, IC

Programmable Relay and Door Sequencer
• Provides a single solution for a variety of applications
• Three relays; two 3-AMP and one 1-AMP
• Built-in surge suppression eliminates the need for external components when installing electric locking devices
• Capable of door timing and advanced relay sequencing

MANUFACTURING OPTIONS
Hager Companies can deliver custom door pulls made to your specifications, or choose from our collection of pull designs. Hager’s comprehensive selection of door pull hardware includes standard push/pull bars or multiple push bar combinations with center-to-centers made to order.

PUSH/PULL PLATE DETAILS
Standard Grip Positions
Pulls are centered vertically or lowered when necessary to meet minimum top spacing requirement. Be certain the pull selected will fit on specified plate under these conditions.

Special Pull Positions
Where pairs of doors are involved and active leaf pull plate is lettered or has a cutout, order pull plate for inactive leaf Grip To Align (WOC). This will ensure horizontal alignment of pull on both plates. Always furnish complete details when ordering non-standard pull positions.

PULL PLATES UP TO 4" WIDE

PULL PLATES OVER 4" WIDE (HANDING REQUIRED WITH CUTOUTS)

Cut Outs
Standard cutout sizes: Cut for Cylinder (CFC) – 1 1/4” (32 mm) diameter; Cut for Thumbturn (CFT) – 3/8” (10 mm) diameter.

All plates may be ordered with cutout option by adding the appropriate suffix (i.e., 30S-CFC).

Standard cutouts are positioned 2” (51 mm) from top of plate where this option has been ordered. Cutouts are centered on plates up to 4” (102 mm) wide or 2” (51 mm) from edge of plates over 4” (102 mm) wide. The latter are handed with cutouts. Furnish hand of door when ordering. Provide complete details for all non-standard cutouts.

Flush Back Mounting
Pull plates using #3, 4, or 10 pull types can be furnished with a flush back (no projections). Specify code FB, (i.e., 33E-FB). Note: Use thru bolts supplied with mountings for best security.

Back To Back Mounting
Many pulls may be ordered back to back (BTB) and availability will be noted on each particular product page (refer to product page). Specify the correct part number and center-to-center unless already specified.

Handicap Option
Pulls that must meet the 2-1/2” (64 mm) clearance for ADA requirements are available. Must specify part number with prefix “H” (i.e., H2E). Please refer to each individual part number for availability.

Engraving
Typical engraved lettering is in Helvetica style. On push or pull plates, standard position is horizontal on a line 2” (51 mm) from top of plate.
**Fasteners**

Illustrated below are various types of fasteners that can be furnished by Hager Companies. Please specify type of fastening desired. All types of fastening cannot be used with all items of hardware. If specified method is not possible, we reserve the right to furnish whatever type we feel is best suited for the installation. When used with tempered glass doors, specify thickness of glass and hole diameter. Fasteners are standard for 1-3/4” doors. Other door thicknesses are optional.

- **Sex bolt and machine screws**
  (various sizes)

- **Lead anchor**
  (used with floor stops in masonry applications)

- **Plastic anchor and full threaded screw**
  (used in drywall or masonry applications)

- **Lag screw and shield**

- **Toggle bolt**
  (ideal for drywall applications)

- **Plastic toggle anchor**
  (used with wall stops in drywall applications)

- **Thru-bolt and finish washer**
  (flat or oval head; size as required)

- **Spanner head machine screws**
  (various sizes furnished at extra charge)

- **Security torx head machine screws**
  (various sizes furnished at extra charge)

ANTIMICROBIAL PROTECTION

Hager Companies’ full line of US32D stainless steel door pulls, push bars, push plates, and pull plates are available with AgION antimicrobial protection.

Hager uses a powder coat process to apply the antimicrobial treated coating to guarantee durability and protection. Antimicrobial resistance on products is affected by moisture in the air. Silver ions interact with humidity and are released creating a cleaner surface. The suppression of bacteria, mold and fungi is as easy as adding antimicrobial treated coating to your Hager products.

Door Protection Plates

The metal door protection plates below meet ANSI A156.6 for J101 Metal Armor Plate, J102 Metal Kickplate, and J103 Metal Mop Plate. The plastic door protection plates below meet ANSI A156.6 for J105 Plastic Armor Plate, J106 Plastic Kickplate, and J107 Plastic Mop Plate. Options for all plates include countersunk holes, UL armor plate stamped, self-adhesive tape, spanner head screws, torx head screws, round corners, wrap around side and bottom return, and 0.125” (3.2 mm) material. All plates below are supplied standard with #6 x 5/8” truss head screws (unless specified otherwise). They are available in mop plate, kick plate, stretcher plate, and armor plate sizes.

**Mop Plate:** Protects the bottom of the pull side of doors subject to cleaning and mopping procedures.

**Kick Plate:** Protects the bottom of the push side of doors subject to scuffing from foot traffic.

**Stretcher Plate:** Protects doors in specific areas where constant contact is made by stretchers, service carts, or other equipment.

**Armor Plate:** Protects lower half of doors from abuse by carts, trucks, and rough usage.

**NFPA 80 STANDARD 6.4.5.1/6.4.5.2/6.4.5.3 Protection Plates**

- Factory installed protection plates shall be installed in accordance with the listing of the door.
- Field installed protection plate shall be labeled and installed in accordance with their listing.

### 230W Convex Wall Stop

- **Certification:** Meets ANSI A156.16 for L02101
- **Diameter:** 2-15/32” (63 mm)
- **Projection:** 1-3/32” (28 mm)
- **Materials:** Cast brass, bronze with grey rubber bumper
- **Fasteners:** One (1) #10 x 1-1/2” PPHWS with plastic and toggle anchor.
- **Notes:**
  - Concealed tamper proof mounting
  - Easy installation by inserting screwdriver through small hole in bumper
  - Specify 230T for machine screw and toggle nut screwpack (10 pk)

### 232W Convex Wall Stop

- **Certification:** Meets ANSI A156.16 for L02101
- **Diameter:** 2-7/16” (62 mm)
- **Projection:** 1” (25 mm)
- **Materials:** Wrought brass, bronze, stainless steel with grey rubber bumper
- **Fasteners:** One (1) #10 x 1-1/2” PPHWS with plastic and toggle anchor
- **Notes:**
  - Concealed tamper proof mounting
  - Easy installation by inserting screwdriver through small hole in bumper
  - Specify 230T for machine screw and toggle nut screwpack (10 pk)

### 234W Concave Wall Stop

- **Certification:** Meets ANSI A156.16 for L02251
- **Diameter:** 2-15/32” (63 mm)
- **Projection:** 1-3/32” (28 mm)
- **Materials:** Cast brass, bronze with grey rubber bumper
- **Fasteners:** One (1) #10 x 1-1/2” PPHWS w/ plastic and toggle anchor
- **Notes:**
  - Easy installation by inserting screwdriver through small hole in rubber bumper
  - Concealed tamper proof mounting
  - Concave rubber bumper prevents damage to locksets with projecting buttons
  - Specify 230T for machine screw and toggle nut screwpack (10 pk)

### 236W Concave Wall Stop

- **Certification:** Meets ANSI A156.16 for L02251
- **Diameter:** 2-7/16” (75 mm)
- **Projection:** 1” (25 mm)
- **Materials:** Wrought brass, bronze, stainless steel with grey rubber bumper
- **Fasteners:** One (1) #10 x 1-1/2” PPHWS w/ plastic and toggle anchor
- **Notes:**
  - Easy installation by inserting screwdriver through small hole in rubber bumper
  - Concealed tamper proof mounting
  - Concave rubber bumper prevents damage to locksets with projecting buttons
  - Specify 230T for machine screw and toggle nut screwpack (10 Pk)
### 250W Convex Wall Stop
- **Diameter:** 1” (25 mm)
- **Projection:** 9/16” (14 mm)
- **Materials:** Cast brass
- **Fasteners:** One (1) #6 x 3/4” screw with plastic anchor and one (1) 0.052 diameter nail
- **Notes:**
  - Concealed mounting screw prevents vandalism
  - For use on drywall
  - Compact design

### 251W Concave Wall Stop
- **Diameter:** 1-7/8” (48 mm)
- **Projection:** 25/32” (20 mm)
- **Materials:** Adhesive backed rubber bumper
- **Finish:** Grey only
- **Notes:**
  - Concave bumper prevents damage to locksets with projecting buttons
  - For areas where concealed mounting is not required
  - Adhesive backing for use on clean smooth flat surfaces only

### 254S Wall Stop & Holder
- **Certification:** Meets ANSI A156.16 for L01341
- **Base Diameter:** 2-11/32” (60 mm)
- **Base Projection:** 3-1/2” (89 mm)
- **Engaged Projection:** 5-19/32” (142 mm)
- **Keeper:** 1” x 2” (25 mm x 51 mm)
- **Materials:** Cast brass with black rubber bumper
- **Fasteners:** Five (5) #10 x 1” FPHWS, and three (3) plastic anchors
- **Notes:**
  - For use on drywall
  - Manual holder ideal for interior and exterior applications
  - Unit functions as a stop, but can serve as a “Hold Open” when hook is manually engaged
  - Ideal for use with locksets with a projection of 3-5/16” (84 mm) or less

### 254W Wall Stop & Holder

Fasteners: Five (5) #10 x 1” OPHWS and three (3) plastic anchors
Notes:
• 2-1/2” (64 mm) max door to floor clearance
• Heavy duty - for use in high traffic areas
• For use on wood floors
• Manual holder ideal for interior and exterior applications
• Unit functions as a stop, but can serve as a “Hold Open” when hook is manually engaged

269F
Heavy Duty Floor Stop
Certification: Exceeds the criteria set forth for a 300-pound impact test (Report #91-04-01646)
Bumper Diameter: 2” (51 mm)
Bumper Height: 1-1/2” (38 mm)
Steel Bolt: 5/8 – 11 x 2-1/2” thread
Materials: Black rubber (fire-resistant)
Notes:
• Designed for high vandalism areas
• Ideal for prisons where floor stops are required
• Grouted in concrete to eliminate exposed screws
269T
Heavy Duty Floor Stop
Certification: Exceeds the criteria set forth for a 300-pound impact test (Report #91-04-01646)
Bumper Diameter: 2” (51 mm)
Bumper Height: 3-1/2” (89 mm)
Steel Bolt: 5/8 – 11 x 2-1/2” thread
Materials: Cast brass
Notes: • Designed for high vandalism areas
• Ideal for prisons where floor stops are required
• Grouted in concrete to eliminate exposed screws

326F
Automatic Floor Stop and Holder
Certification: Meets ANSI A156.16 for L01301
Holder Projection: 1-15/16” (49 mm)
Holder Base: 3-1/16” x 3-1/2” (78 mm x 89 mm)
Floor Strike: 2” x 4-3/32” (51 mm x 104 mm)
Strike Height: 1-1/4” (32 mm)
Max Door to Floor Clearance: 1/2” (13 mm) or less
Materials: Cast brass
Fasteners: Three (3) #14 x 1-1/2” FPHWS, three (3) 1/4-20 x 3/4” FPHMS, three (3) 1/4-20 lead anchors, four (4) 12-24 x 1” TPHMS, and four (4) #12 x 1” TPHWS
Notes: • For use on wood or metal doors and wood or concrete floors
• Ideal for heavy traffic situations that require frequent hold open
• Firm pull releases holding mechanism
• Holder has vertical adjustment once mounted on the door

327F
Automatic Floor Stop and Holder
Certification: Meets ANSI A156.16 for L01301
Holder Projection: 1-15/16” (49 mm)
Holder Base: 3-1/16” x 3-1/2” (78 mm x 89 mm)
Floor Strike: 2-3/16” x 4-1/8” (51 mm x 105 mm)
Strike Height: 1-3/4” (44 mm)
Max Door to Floor Clearance: 9/16” to 1-1/16” (14 mm to 27 mm)
Materials: Cast brass
Fasteners: Three (3) #14 x 1-1/2” FPHWS, three (3) 1/4-20 x 3/4” FPHMS, three (3) 1/4-20 lead anchors, four (4) 12-24 x 1” TPHMS, and four (4) #12 x 1” TPHWS
Notes: • For use on wood or metal doors and wood or concrete floors
• Ideal for heavy traffic situations that require frequent hold open
• Firm pull releases holding mechanism
• Holder has vertical adjustment once mounted on the door

**Kick Down Door Holder**

Certification: Meets ANSI A156.16 for L71382

Base: 1-7/16” x 2-1/8” (37 mm x 54 mm)

Arm: 3-13/16” (97 mm)

Materials: Cast iron with rubber tip

Finishes: S1 - Sprayed Aluminum, S2 - Sprayed Brass, S3 - Sprayed Bronze

Fasteners: Four (4) #6 x 3/4” OPH tapping screws

Notes:
- Provides simple hold and release with a touch of the foot
- 2-1/4” (57 mm) max door to floor clearance

---

**270D**

**Kick Down Door Holder**

Certification: Meets ANSI A156.16 for L01381

Base: 1-19/32” x 1-25/32” (41 mm x 45 mm)

Arm: 3-1/2” (89 mm)

Materials: Cast brass with rubber tip

Fasteners: Three (3) #6 x 3/4” OPHWS

Notes:
- Provides simple hold and release with a touch of the foot
- 2-1/4” (57 mm) max door to floor clearance

---

**270R**

**Replacement Rubber Tip**

Materials: Rubber

Notes:
- For use with 270D and 271D
- Sold in packs of 10

Certification: Meets ANSI A156.16 for L01381

Base: 1-19/32” x 1-25/32” (41 mm x 45 mm)

Arm: 4-7/16” (87 mm)

Materials: Cast brass with rubber tip

Fasteners: Three (3) #6 x 3/4” OPHWS

Notes:
- Provides simple hold and release with a touch of the foot
- 3-1/4” (83 mm) max door to floor clearance
SURFACE BOLTS

**275D | 276D**

**Surface Bolt**

Certification: Meets ANSI A156.16 for L04161

- **Overall Projection:** 1-3/8” (35 mm)
- **Overall Width:** 2-1/32” (52 mm)
- **Bar:** 3/4” x 1/4” (19 mm x 6 mm) thick
- **Length:**
  - 275D - 8” (203 mm)
  - 276D - 12” (305 mm)
- **Throw:** 1” (25 mm)
- **Materials:** Steel
- **Finishes:** US3, US10, US10B, US26D
- **Fasteners:** Eight (8) #10 x 1-1/4” FPHWS and eight (8) 10-24 x 1” undercut FPHMS
- **Notes:**
  - Mortise bottom strike and universal top strike included
  - Strong tension springs prevent creep
  - UL listed for use on inactive leaf of a pair of 3-HR labeled fire doors

**278D**

**Surface Bolt**

- **Bolt Length:** 6” (152 mm)
- **Bolt Width:** 7/16” (11 mm)
- **Bolt Throw:** 31/32” (25 mm)
- **Base Width:** 19/32” (15 mm)
- **Knob Diameter:** 1/2” (13 mm)
- **Projection:** 3/4” (19 mm)
- **Materials:** Brass
- **Finishes:** US3, US10B, US26D
- **Fasteners:** Four (4) #5 x 5/8” FPHWS
- **Notes:**
  - Mortise and universal strikes included
  - Concealed screw design enhances appearance and security
  - Permanent stop prevents bolt disengagement from track

**279D**

**Surface Bolt**

- **Length:** 4” (102 mm)
- **Width:** 1-11/16” (43 mm)
- **Throw:** 3/8” (10 mm)

- **Projection:** 1-1/4” (32 mm)
- **Knob Diameter:** 29/32” (23 mm)
- **Materials:** Brass
- **Finishes:** US10B, US26D
- **Fasteners:** Twelve (12) #6 x 3/4” FPHWS
- **Notes:**
  - Mortise and universal strikes included
FLUSH BOLTS & COORDINATING DEVICES

**280X**

**Dust Proof Strike**

Certification: Meets ANSI A156.16 for L04021

Face Plate: 1-7/16” x 2-29/32” x 1/8” depth (37 mm x 74 mm x 3 mm)

Barrel Diameter: 1” (25 mm)

Barrel Depth: 2-3/16” (56 mm)

Plunger Diameter: 3/4” (19 mm)

Materials: Brass

Fasteners: Two (2) #8 x 1” FPHWS, two (2) plastic anchors, and spanner wrench

Notes: • Packed unassembled with plate, strike, fasteners, and spanner wrench

• May be used with carpet or threshold application by omitting face plate

• Designed for use with the bottom bolt of a flushbolt set

• Spring loaded plunger returns to floor or threshold level anytime flushbolt is retracted, eliminating the need to clean out the bottom strike

**281D**

**Slide Flush Bolt**

Certification: Meets ANSI A156.16 for L04201

Faceplate: 3/4” x 6” (19 mm x 153 mm)

Bolt Diameter: 1/2” (13 mm)

Bolt Throw: 1” (25 mm)

Bolt Backset: 7/16” (11 mm)

Strike: 7/8” x 1-3/4” (22 mm x 45 mm)

Materials: Brass, bronze faceplate with steel components

Fasteners: Four (4) #6 x 3/4” FPHWS

Notes: Double action spring design provides automatic holding of bolt in projected or retracted position

**282D**

**Manual Flush Bolt**

Certification: • Fits ANSI A115 door and frame prep

• Meets ANSI A156.16 for L14251

Face Plate: 1” x 6-3/4” (25 mm x 172 mm)

Bolt Head: 1/2” (13 mm) square

Bolt Throw: 3/4” (19 mm)

Standard Rod Length: 12” (305 mm) (center of face to corner of door)

Bolt Backset: 3/4” (19 mm)

Mortise Strike: 15/16” x 2-1/4” (24 mm x 57 mm)

Materials: Brass faceplate with steel components

Fasteners: Eight (8) #8 x 3/4” combo screws; eight (8) #8 x 1-1/2” combo screws

Notes: • For use on hollow metal/fire-rated doors

• Non-handed

• Bolt head rods are adjustable

• Sold in increments of two

• 3 hour fire rating for metal doors up to 4 feet wide by 10 feet tall

• 282S strike plate bag and 282P bolt head available

• Specify 282R for optional rod length of 18” (457 mm), 24” (610 mm), or 30” (762 mm) (bolt head not included)
### 283D

**Manual Flush Bolt**

- **Certification:** Meets ANSI A156.16 for L14261
- **Face Plate:** 1” x 6-25/32” (25 mm x 172 mm)
- **Bolt Head:** 1/2” (13 mm) square
- **Bolt Throw:** 3/4” (19 mm)
- **Bolt Backset:** 3/4” (19 mm)
- **Mortise Strike:** 15/16” x 2-1/4” (24 mm x 57 mm)
- **Materials:** Brass faceplate with steel components
- **Fasteners:** Eight (8) #8 x 3/4” combo screws
- **Notes:**
  - For use on wood composite/ fire-rated doors
  - Non-handed
  - Bolt head rods are adjustable
  - 1-1/2 hour fire rating for wood doors up to 4 feet wide by 10 feet tall

### 291D

**Automatic Flush Bolt Set for Wood Covered Composite Doors**

- **Certification:** B, C, D, and E Label
  - ANSI A156.3 Type #25
- **Face Plate:** 1” x 8-1/2” (25 mm x 216 mm)
- **Bolt Head:** 1/2” (13 mm) square
- **Bolt Throw:** 3/4” (19 mm)
- **Bolt Backset:** 3/4” (19 mm)
- **Mortise Strike:** 15/16” x 2-1/4” (24 mm x 57 mm)
- **Materials:** Stainless steel and brass with steel components
- **Fasteners:** Six (6) #8 x 1” combo screws, three (3) #10 x 1” SMS, and two (2) plastic anchors
- **Notes:**
  - Thermal lock automatically locks inactive door under high fire/heat conditions
  - 280X dust proof strikes are recommended for use with these sets
  - Used in pairs at top and bottom of inactive door
  - Fully automatic – bolts retract when active door is opened; bolts extend when active door is closed
  - Non-handed
  - Bolt head rods are adjustable
  - 1-1/2 hour fire rating for wood doors up to 4 feet wide by 9 feet tall
**292D**

**Automatic Flush Bolt Set for Metal Doors**

**Certification:**  A, B, C, D, and E Label

ANSI A156.3 Type #25

**Face Plate:**  1” x 6-3/4” (27 mm x 172 mm)

**Bolt Head:**  1/2” (13 mm) square

**Bolt Throw:**  3/4” (19 mm)

**Bolt Backset:**  3/4” (19 mm)

**Mortise Strike:**  15/16” x 2-1/4” (24 mm x 57 mm)

**Materials:**  Stainless steel and brass with steel components

**Fasteners:**  Ten (10) #8 x 1” combo screws

**Notes:**
- Thermal lock automatically locks inactive door under high fire/heat conditions
- 280X dust proof strikes are recommended for use with these sets
- Used in pairs at top and bottom of inactive door
- Fully automatic – bolts retract when active door is opened; bolts extend when active door is closed
- Non-handed
- Bolt head rods are adjustable
- 3-hour fire rating for metal doors up to 4 feet wide by 9 feet tall

**293D**

**Constant-Latching Flush Bolt Set for Inactive Metal Doors**

**Certification:**  A, B, C, D, and E Label

ANSI A156.3 Type #27

**Face Plate:**  1” x 6-3/4” (25 mm x 172 mm)

**Bolt Head:**  1/2” (13 mm) square

**Bolt Throw:**  3/4” (19 mm)

**Bolt Backset:**  3/4” (19 mm)

**T-Strike:**  1-1/8” x 2-3/4” (28 mm x 70 mm)

**Materials:**  Stainless steel and brass with steel components

**Fasteners:**  Eight (8) #8 x 1” combo screws

**Notes:**
- Thermal lock automatically locks inactive door under high fire/heat conditions
- 280X dust proof strikes are recommended for use with these sets
- Consists of one 292S and one 293S for two point latching
- Inactive door remains latched until the active door is opened, releasing the automatic bottom bolt - Top bolt can be manually released by pressing plunger - Inactive door will relatch automatically when closed
- Non-handed
- Bolt head rods are adjustable
- 3-hour fire rating for metal doors up to 4 feet wide by 9 feet tall
294D
Constant-Latching Flush Bolt Set for Inactive Wood Covered Composite Doors
Certification: B, C, D, and E Label
ANSI A156.3 Type #27
Face Plate: 1” x 8-1/2” (25 mm x 216 mm)
Bolt Head: 1/2” (13 mm) square
Bolt Throw: 3/4” (19 mm)
Bolt Backset: 3/4” (19 mm)
T-Strike: 1-1/8” x 2-3/4” (28 mm x 70 mm)
Materials: Stainless steel and brass with steel components
Fasteners: Four (4) #8 x 1” combo screws, three (3) #10 x 1” SMS, and two (2) plastic anchors
Notes:
• Thermal lock automatically locks inactive door under high fire/heat conditions
• 280X dust proof strikes are recommended for use with these sets
• May be used on doors 4 ft. wide and 9 ft. high
• Consists of one 291S and one 294S for two point latching
• Inactive door remains latched until the active door is opened, releasing the automatic bottom bolt - Top bolt can be manually released - Inactive door will relatch automatically when closed
• Non-handed
• Bolt head rods are adjustable
• 1-1/2 hour fire rating for wood doors up to 4 feet wide by 9 feet tall

295M
Automatic Flush Bolt Set with Fire Bolt for Metal Doors
Certification: ANSI/BHMA 156.3 Type #25
Face Plate: 1” x 6-3/4” (25 mm x 172 mm)
Bolt Head: 1/2” (13 mm) square
Bolt Throw: 3/4” (19 mm)
Bolt Backset: 3/4” (19 mm)
Mortise Strike: 15/16” x 2-1/4” (24 mm x 57 mm)
Materials: Stainless steel and brass with steel components
Fasteners: Ten (10) #8 x 1” combo screws
Notes:
• Fire bolt is activated at 230º Fahrenheit projecting into active door locking leaves together - This combination eliminates the bottom flushbolt and eliminates floor preparation
• Fully automatic – Bolt retracts when active door is opened - Bolt extends when active door is closed
• Non-handed
• Bolt head rods are adjustable
• 3-hour fire rating for metal doors up to 4 feet wide by 9 feet tall
295W
Automatic Flush Bolt Set with Fire Bolt for Wood Doors
Certification: ANSI/BHMA 156.3 Type #25
Face Plate: 1” x 8-1/2” (25 mm x 216 mm)
Bolt Head: 3/4” (19 mm)
Bolt Throw: 3/4” (19 mm)
Bolt Backset: 3/4” (19 mm)
Mortise Strike: 15/16” x 2-1/4” (24 mm x 57 mm)
Materials: Stainless steel and brass with steel components
Fasteners: Six (6) #8 x 1” combo screws, three (3) #10 x 1” SMS, and two (2) plastic anchors
Notes:
• Fire bolt is activated at 230º Fahrenheit projecting into active door locking leaves together - This combination eliminates the bottom flushbolt and eliminates floor preparation
• Fully automatic – Bolt retracts when active door is opened - Bolt extends when active door is closed
• Non-handed
• Bolt head rods are adjustable
• 20-min fire rating for wood doors up to 4 feet wide by 9 feet tall

296W
Automatic Flush Bolt Set for Wood Doors
Certification: ANSI/BHMA 156.3 Type #25
Face Plate: 1-1/8” x 2-1/4” (29 mm x 57 mm)
Bolt Head: 1/2” (13 mm) diameter
Bolt Throw: 3/4” (19 mm)
Bolt Backset: 1-1/2” (39 mm)
Materials: Stainless steel and brass with steel components
Fasteners: Four (4) #8 x 1” SMS, two (2) #8 x 3/4” combo screws, two (2) plastic anchors
Strike: 1-1/8” x 2-1/4” (29 mm x 57 mm)
Notes:
• Non-handed
• ADA compliant
• Ideal for wood veneer doors
• Only two (2) 1-1/8” diameter holes needed for easier door preparation
• Opening active door retracts top and bottom bolts
• Smaller profile adds stability to the door
• 1-1/2 hour fire rating for doors up to 4 feet wide by 9 feet tall
297C
Carrying Bar
Certification:
ANSI/BHMA A156.3 Type #27
Projection:
25/32” (20 mm)
Base:
1-3/4” x 2-1/4” (45 mm x 57 mm)
Materials:
Brass and stainless steel
Finishes:
Fasteners:
Two (2) 12-24 x 3/4” PPHMS w/ sex nuts
Notes:
• Used when it is possible for the inactive door to be opened before the active door
• For use on pairs of doors with astragals
• For use in conjunction with a 297D or 298D coordinator
• Prevents damage to the doors and other hardware
• Carry bar is not required when the inactive door is equipped with automatic or self-latching flushbolts
• Non-handed

297D
Coordinating Device
Certification:
ANSI/BHMA A156.3 Type #21A
Projection:
25/32” (20 mm)
Base:
1-5/8” x 5/8” (41 mm x 16 mm)
Materials:
Steel
Finishes:
Black Prime Coat
Fasteners:
Seven (7) 12-24 x 1-1/4” TPHMS and four (4) #8 x 1” FPH combo screws
Notes:
• For use with overall frame widths 60” (1524 mm), 72” (1829 mm), or 96” (2438 mm), consult Hager Customer Service if overall frame width is different than our stock sizes
• Coordinating device is 52” (1321 mm) long for all stock sizes 60” (1524 mm), 72” (1829 mm), or 96” (2438 mm
• Filler bar is cut to length by factory to match customers overall frame width
• Non-handed
• Designed for use on pairs of doors when one door needs to close before the other
• Active door lever, located nearest to the active stop, holds the active door open until the trigger mechanism is released by the closing of the inactive leaf
• Coordinator may not span the entire length of stop, 297F filler bar may be needed to fill up the extra space
• Compatible with flushbolts
• Optional mounting bracket 297B may be used when mounting other soffit applied hardware
• For use with active door widths 30” (762 mm) – 48” (1219 mm)
• If active and inactive doors are unequal in length, consult Hager Customer Service for proper sizing
• Do not use spring hinges with coordinating device
**297F**

**Filler Bar**

Stop Height: 5/8” (16 mm)  
Material: Steel  
Finishes: Black prime coat  
Length: 18-5/8” (473 mm) (for jamb opening widths 52” – 72”);  
42-5/8” (1082 mm) (for jamb opening widths 73” – 96”)  
Notes: For use with 297D coordinator

---

**297B**

**Mounting Bracket**

Jamb Depth: 4-3/4” (121 mm)  
Stop Height: .58” (15 mm)  
Material: Aluminum  
Finishes: Black prime coat  
Fasteners: Two (2) 12-24 x 2” thread forming screws  
Notes:  
- For use with 297D coordinator  
- For all soffit widths  
- Allows soffit mounted hardware to be properly installed without damaging the coordinator, such as a parallel arm closer or a non-fire-rated surface vertical rod strike  
- Spacer 1-469-5130 (sold separately) is required when used in fire door applications with "fifth hole" closer parallel arm brackets.

**298D**

**Gravity Coordinator**

Certification: ANSI A156.3 Type #21B  
Base: 5-1/2” x 1-1/8” (140 mm x 29 mm)  
Projection: 7” (178 mm)  
Rail Height: 2-1/2” (64 mm) min  
Materials: Cast brass with rubber roller and nylon cam roller  
Fasteners: Two (2) #12 x 1” OPHWS, two (2) #6 x 3/4” FPHWS, two (2) #8 x 3/4” TPHWS, and one (1) #6 x 3/4” FPHWS  
Notes:  
- Non-handed  
- Recommended for use with flush top metal doors only  
- Use automatic flush bolts only  
- Use 297D if using self latching flush bolts  
- Gravity arm and door bracket are adjustable on the job for ease of installation  
- For use on pairs of doors with astragal on active door up to 4’ (1219 mm) wide or with astragal on inactive door up to 3’-4” (1016 mm) wide or with astragal on both doors up to 2’-10” (864 mm) wide  
- Maximum astragal overlap - 7/8” (22 mm)  
- Do not use spring hinges with coordinating device
311H
Push/Pull Latch
Certification:
ANSI A156.2 Closest Equivalent

(Bored Latch - Series 4000 - Grade 2)

Push & Pull Levers:
1-15/16” x 4-1/2” (49 mm x 114 mm)

Escutcheons:
3-1/16” x 5” (78 mm x 127 mm)

Projection:
2-5/8” (67 mm)

Bolt Throw:
1/2” (13 mm)

Bolt Diameter:
3/4” (19 mm)

Backset:
• 2-3/4” (70 mm) - Standard
• 5” (127 mm) - Optional

Strike (TEE) - standard:
1-1/8” x 2-3/4” (29 mm x 70 mm)

Strike (ASA) - standard:
1-1/4” x 4-7/8” (32 mm x 124 mm)

Door thickness:
1-3/4” (45 mm)

Materials:
Zinc and stainless steel

Finishes:

Notes:
• Non-handed
• Engraving is optional

Optional Vertical Mounting
Requires 2-3/4” to 5”
(70 mm - 127 mm) backset

Optional Horizontal Mounting
Requires 5” (127 mm) backset

318D
Roller Latch with Tee Strike
Certification:
Meets ANSI A156.16 for E09091

Roller Faceplate:
1” x 3-3/8” (25 mm x 86 mm)

Strike:
1-1/8” x 2-3/4” (29 mm x 70 mm)

Strike Gauge:
0.171” (4.3 mm)

Materials:
Brass

Finishes:

Fasteners:
Two (2) #10 x 1-1/2” FPHWS, two (2) #8 x 1” FPHWS, and two (2)
8-32 x 3/4” FPHMS

Notes:
• Adjustable spring tension with nylon roller
• Projection of roller is easily adjusted using screws on faceplate
• Max projection of the roller is 3/8” (9.5 mm) allowing for variance in door
  and frame clearance
318S  
Roller Latch with Stop  
Certification: Meets ANSI A156.16 for E0911  
Roller Faceplate: 1-7/16" wide x 4-7/16" high x 11/16" angle (37 mm x 111 mm x 18 mm)  
Strike: 1-1/8" x 2-1/4" (29 mm x 57 mm)  
Strike Gauge: 0.171" (4.3 mm)  
Materials: Brass  
Fasteners: Two (2) #10 x 1-1/2" FPHWS and two (2) 8-32 x 3/4" FPHMS  
Notes:  
• Adjustable spring tension with nylon roller  
• Projection of roller is easily adjusted using screws on faceplate  
• Max projection of the roller is 3/8" (9.5 mm) allowing for variance in door and frame clearance  

320R  
Roller Catch with Tee Strike  
Certification: Meets ANSI A156.16 for E0910  
Roller Faceplate: 1-1/8" x 2-1/4" (29 mm x 57 mm)  
Strike: 1-1/4" x 2-3/4" x 1/16" thick (32 mm x 70 mm x 1.5 mm)  
Materials: Brass

Hager Companies offers a complete line of thresholds & weatherstripping products for virtually any type of door application. What's more, each meets or exceeds ANSI-grade quality, durability, and performance levels. For enhanced levels of safety and security, we also offer intumescent products for positive pressure solutions, including edge sealing and smoke control systems. All of which make Hager threshold, weatherstripping, and door bottom products an excellent choice for standard or custom applications in schools, hospitals, office buildings, and more.

GENERAL INFORMATION

PRODUCT PRESENTATION
Dimensions on stainless steel extrusions may differ slightly than those detailed. Questions regarding any dimensions should be directed to Hager Companies Customer Service.

Drawings or illustrations used in the catalog are subject to change without notice. Questions on any dimensions should be obtained by contacting Hager Companies Customer Service.

FABRICATION OPTIONS
• Bevel one edge of threshold
• Rip one edge width of threshold
• L-notch both ends of threshold
• U-notch both ends of threshold
• Tack weld one line of threshold
• Pan for water return of threshold
• Sure Step Non-Slip Abrasive Coating – A rugged, durable coating that can be applied to all Hager Companies’ metal thresholds. Ideal for thresholds being used in wet, oily or corrosive environments.

MATERIALS & FINISHES
Metals
All aluminum extrusions are of alloy 6063-T5.

For stock finishes, refer to the code listed below each individual item throughout the catalog. Please inquire for the availability on nonstock finishes.

ORDERING INFORMATION
When ordering, please specify by product number, length, quantity, finish and fasteners required. Thresholds & weatherstripping are fabricated in standard sizes with 1/2” (12.7 mm) extra on thresholds 48” (1219.2 mm) and under.
Anodized thresholds are fabricated in standard sizes with 1/4” (6.35 mm) extra on thresholds 48” (1219.2 mm) and under.
Thresholds over 48” (1219.2 mm) are supplied with 1” (25 mm) extra length for fitting. Anodized thresholds over 48” (1219.2 mm) are fabricated in standard sizes with 3/4” (19.05 mm) extra length for fitting. Exact lengths are available upon request (specify CTEL).

Example: 891S V 36 x 84 MIL

Gaskets
Gasketing is available in a wide variety of materials. Vinyl is an economical choice and remains flexible down to -40°F (-40°C). EPDM gasketing is supplied both as a solid (dense) and as a closed cell sponge with a tough outer skin. It remains flexible down to -50°F (-49°C). Silicone gasketing provides the best resistance to cold by remaining flexible down to -70°F (-57°C).
Refer to the price book for a list of available replacement gaskets. Gasketing codes are listed below.

FASTENERS

Standard
All products are furnished with appropriate fasteners as listed, except where noted. Most thresholds are furnished with mounting holes and #10 x 1-1/2” flat head sheet metal screws. Most weatherstripping products are furnished with slotted holes and #6 x 5/8” pan head sheet metal screws.

Optional

Thresholds
- #10 wood screws and plastic anchors
- #10 wood screws and lead anchors
- #10 machine screws and lead anchors
- #10 stainless steel wood screws
- #10 stainless steel wood screws and plastic anchors
- #10 stainless steel wood and lead anchors
- 1/4-20 stainless steel machine screws and lead anchors
- 1/4-20 machine screws and lead anchors
- 1/4-20 x 2” flat head sleeve anchor
- #10 torx sheet metal screws
- #10-24 x 1-1/2” stainless steel torx machine screw with lead anchor
- #10-stainless steel spanner head wood screw with lead anchor
- Cast-on anchors (cast products only)
- Tap-con type (1/4” x 1-3/4”)

Weatherstripping
- #6 x 5/8” pan-head stainless steel screws
- #6 x 5/8” self-drilling (TEK) screws (Steel-zinc plated)
- #6 x 5/8” pan-head torx sheet metal screws
- #6 x 5/8” stainless steel self-drilling (TEK) screws
- 1/4-20 x 1-1/4” sex bolts
- Two-way self-adhesive tape

GENERAL INSTALLATION INSTRUCTIONS FOR PRESS-ON PRODUCTS:
- Product returnable within first 6 months after purchase date
- Installation should take place after construction has been completed, and final cleaning has taken place
- The frame should be cleaned; isopropyl alcohol is recommended
- Not recommended for unsealed or porous applications
- Do not store these products in extreme heat/cold or for prolonged periods of time

CERTIFICATIONS

Handicap Accessibility
Products denoted by this symbol are designed for applications where handicap accessibility is specified. These products are no greater than 1/2” (12.7 mm) in height and have no more than 1/4” (6.3 mm) vertical rise or with slope proportions no greater than 1:2 slope. Offset floor conditions greater than 1/2” (12.7 mm) require a 1:12 slope.
Underwriter’s Laboratories
Products denoted by this symbol are classified and labeled by Underwriter’s Laboratories, Inc.® as gasket material for use on listed steel frames and/or classified swinging type fire doors of the hollow metal or steel covered composite type rated up to 3 hours, or wood core fire doors rated up to 1-1/2 hours. Test results show these products do not adversely affect the fire resistance of the door or frame according to its UL rating. All products are regularly checked under a labeling and listing service. The clearance between the door and the frame and between the meeting edges of doors swinging in pairs shall be 1/8” + 1/16” (3.18 mm + 1.59 mm) for steel doors and shall not exceed 1/8” (3.2 mm) for wood doors.

• UL 10C (Positive Pressure) complies with IBC, NFPA 80 and NFPA 252 for hollow metal fire doors rated up to 3 hours and wood fire doors rated up to 90 minutes.
• UL 10B complies with NFPA 80 and NFPA 252 for hollow metal fire doors rated up to 3 hours and wood fire doors rated up to 90 minutes.

Notes: Ratings on some items may vary and are noted on the individual products. For a more complete look at classifications on individual products, please visit www.ul.com/database and reference R13647.

THE INTERNATIONAL BUILDING CODE (IBC)
The International Building Code (IBC) requires swinging fire doors to be tested in accordance with ANSI/UL 10C or NFPA 252, with the neutral pressure level established at 40 inches or less above the sill. This causes “positive pressure” forces against the door assembly above 40 inches.

The result is hot gases and smoke leak out between the door and frame above this level, posing a serious threat to life-safety; and on wood doors rapidly deteriorating the integrity of the door edges, requiring either a built-in or supplemental “edge sealing system” to pass the test.

Fire door assemblies in corridors and smoke barrier walls are required to be smoke and draft control assemblies tested in accordance with UL1784 allowing a maximum air leakage of 3 cubic feet per minute per square foot of door opening at ambient temperature (75°F) and elevated temperature (400°F). These assemblies require the letter “S” on the fire rating label of the door indicating compliance “when listed or labeled gasketing is also installed.”

Fire doors are classified based upon their construction and edge sealing system requirements. Fire-rated gasketing is classified as follows:

Category G - Edge-sealing system
Category H - Smoke and draft control gasketing
Category J - Gaskets other than category G or H

Gaskets that are edge-sealing systems. Category “G” - edge-sealing systems are for use with fire doors requiring an edge seal to meet positive pressure code requirements. These systems are surface-applied to either the perimeter of the door frame or meeting edges of door pairs. Category “G” gaskets are usually intumescent material; this material will swell many times its original size during a fire and help contain the spread of fire by sealing the edges of the door.

Fire Test - Category J
Products that are positive pressure tested to determine that they do not contribute to flaming during a fire; they do not provide an edge-sealing system. Examples are gaskets used for sound, draft control or automatic door bottoms.

Smoke and Draft Control Test - Category H
This is a separate second test that does not involve fire. All gaskets being tested for smoke must initially be fire tested under the requirements of UL 10C and receive a category “G” or “J” rating before being smoke tested.

Below are some key phrases that indicate positive pressure requirements:
• IBC 2003 (and later) - International Building Code
• UL 10-C - Positive Pressure Fire Test
• ASTME-2074-00 - Fire Test of Door Assemblies
• Shall meet positive pressure requirements
• Intumescent seals - imply positive pressure

The www.iccsafe.org web site of the International Code Council (ICC) has a map of code adoption by state. This site is frequently updated and by clicking on a state, you can see what codes they have adopted.
New and existing fire doors are classified/labeled by one of the following designation systems:

- Hourly rating designation
- Alphabetical letter designation
- A combination of both

Pocket door aka “doors that vanish”— Hager Companies offer innovative design options for saving space and complementing classic and contemporary decors.

Hager’s pocket-door hardware is ideal for single and bi-parting pocket-door configurations in rough openings from two to four feet.

Steel or aluminum tracks support doors up to 250 lbs. and are designed for simple installation and durable performance. Hager’s 4-wheel spring carrier design provides an ultra-smooth gliding movement.

Pocket door hardware is available in kits (by opening length) or individual components.

Pocket frame kits include all the framing and hardware components to make installing pocket doors easy.

Architecturally designed wall-mount system for commercial or residential spaces

Hager Companies wall-mount sliding door hardware is designed to blend seamlessly with any interior décor — from a contemporary uptown loft, to any more traditional environment. This architecturally focused design delivers a clean, finished look to any interior doorway or room divider (from two to six opening feet) while providing maximum space utilization.

Hager’s 9710 Wall-Mount system is available in clear anodized and dark bronze finishes. Quiet four-wheel ball bearing carriers support doors up to 250 lbs. Hardware supports one- and two-door applications.

Wall-mount door hardware is available in kits (by track length) or individual components.

9400 SERIES BARN DOOR HARDWARE - CONESTOGA SERIES - HOW TO ORDER

IMPORTANT:

1. Track is ordered separately from hardware kit.
2. Track and Carrier Hardware are shipped in separate cartons.

Single Door Solution:

1) 9450 Track: Specify length (48”, 72” or 96”).

2) Carrier Hardware Kit: Specify style – Includes all mounting hardware

Example:

- 9450 - 48
- 9450 - 72
- 9450 - 96

Bi-Part Door Solution:

If using two doors that are 3’ wide, order a 6’ track per door, for a total of 12’. This allows the doors to clear the door opening when in the open position. Order one carrier hardware kit per door and one Splice Kit.

To Order:

1) 9450 Track: Specify quantity and length.

2) Carrier Hardware Kit: Specify quantity and carrier style. Example: Order 2 of part number 9453, 5” hook carrier style – Includes all mounting hardware.

3) Splice Kit: Order 1 of part number 1-269-8691 Flat Rail Splice Kit.
